REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the State Climatologist at Weather Bureau Airport Station, 1710 Wilshire Blvd, Austin 2, Texas, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 and on the maps, became effective with data for October 1956.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921-1950, adjusted to represent observations taken at the present location.

Water equivalent values published in Table 7 are the water equivalent of snow, sleet or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record. Water equivalent of snow on the ground is measured at selected stations when two or more inches of snow are on the ground. Entries of Snowfall in Tables 2 and 7, and in the seasonal snowfall table, include snow and sleet. Entires of snow on ground include snow, sleet and ice.

Data in Tables 3, 5, and 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST.

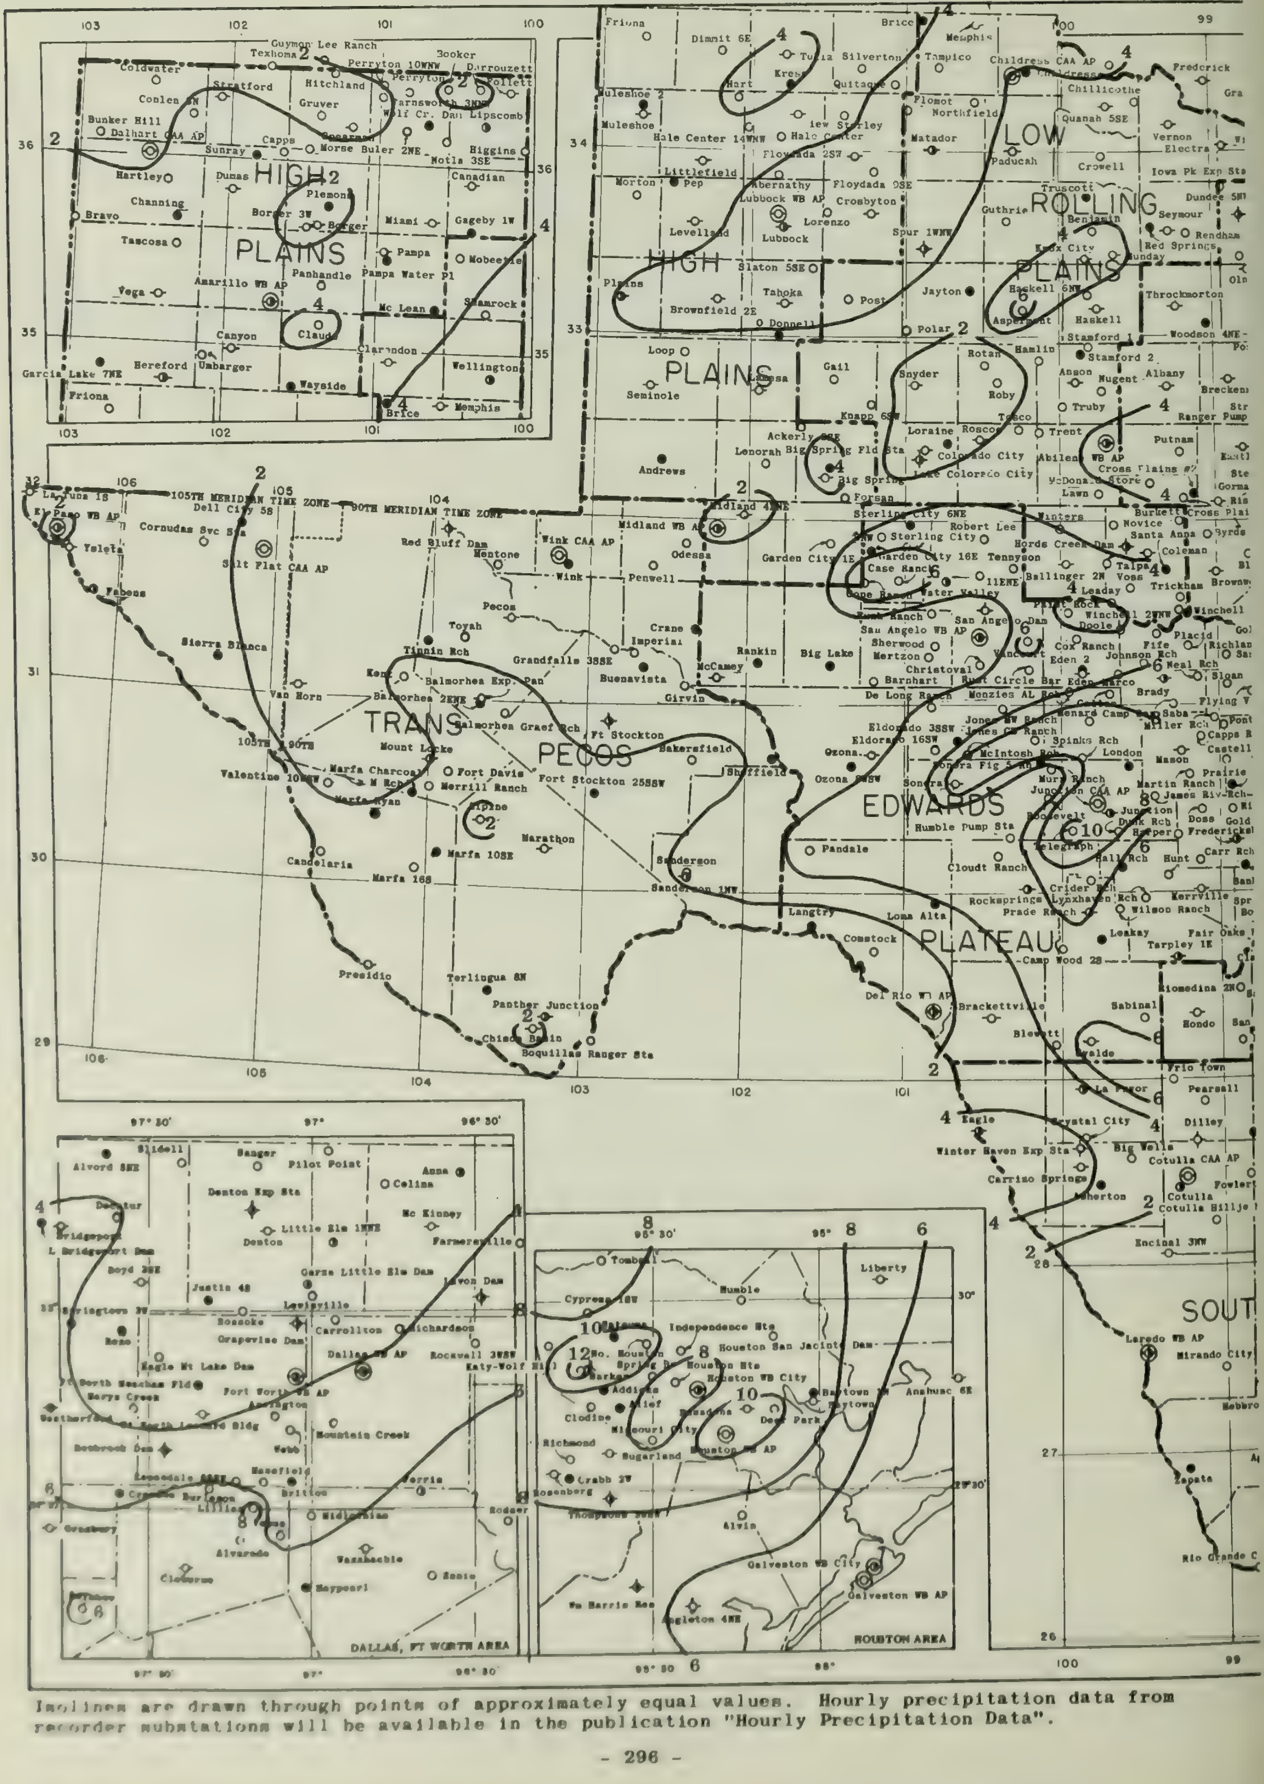
-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly totals.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AM	Data based on observational day ending before noon.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".
D	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; if average value is entered, less than 10 days record is missing. See Table 5 for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be puslished later in Hourly Precipitation Data.)
T	Trace, an amount too small to measure.
Y	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

ubscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annaul Summary.) Checks and money orders should e made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, overnment Printing Office, Washington 25, D. C.

nformation concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation istory" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. Simiar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data Annual, obtained as indicated above, price 5 cents.

NWRC, Asheville, N. C. -- 12-9-57 -- 1650

TOTAL PRECIPITATION



Isolines are drawn through points of approximately equal values. Hourly precipitation data from recorder substations will be available in the publication "Hourly Precipitation Data".

UNIVERSITY OF ILLINOIS

ASHEVILLE: 1958

WEATHER SUMMARY

November was cool and rainy. The wet weather delayed the harvest and caused considerable loss of unharvested crops, but benefited pastures and ranges.

There were very few mild days in November. The three brief mild-weather spells were the 1st and 2d, the 12th to 17th, and 25th to 27th. Most stations registered their highest temperatures for the month on the 1st or 2d. Some eastern stations registered their monthly maximum temperatures during the period, 15th to 17th. Monthly maximums ranged, in general, from the 70's over the High Plains to the 80's over the rest of the State. The highest temperature for the State, 92°, occurred at Rio Grande City on November 1.

The especially cool periods were the 3d to 11th (except along the Upper Coast), the 19th to 24th, and the last few days. Most stations over the northern Blacklands, Cross Timbers, Plains, and Trans-Pecos registered their lowest temperatures for the month on November 23. Over east Texas, the upper Coast, Edwards Plateau, and the southern sections, the lowest temperatures at most stations came on the 24th or 30th. Monthly minimum temperatures ranged from a few degrees above freezing over the southern counties and along the Coast to near zero at numerous stations over the northern High Plains. The coldest temperature for the State, 2° below zero, occurred at Plains on the morning of November 23.

Monthly mean temperatures ranged from 38.0° at Stratford to 68.5° at Port Isabel. Monthly mean temperatures were slightly above normal in the Houston and Port Arthur vicinities. Elsewhere over the State, monthly mean temperatures were generally below the long-term means. At several northern stations the temperature departures exceeded -5.0°. Monthly temperature departures ranged from +4.2° at Kirbyville Forest Service to -8.1° at Big Spring.

Rainfall was very unevenly distributed over the State. Most stations in the Trans-Pecos and the extreme northwestern High Plains received less than an inch of rain during November. The least amount, 0.05 inch, fell at Candelaria. Most other Plains stations and most stations on the Edwards Plateau received from one to three inches. Most stations over the eastern half of Texas received more than four inches. Numerous stations in the eastern sections received more than six inches of rain in November. Several large areas received more than ten inches. The greatest monthly total, 13.83 inches, fell at Bronson. The monthly totals at most Plateau stations were less than the long-term November means. Elsewhere, rainfall in November was more than seasonal. Large southern areas received from two to four times their long-term average amounts for November. A few vicinities in the north central and northeastern counties received more than four times their November long-term means.

Generous rains fell on many days over eastern Texas and scanty rains fell on a few days over the Trans-Pecos and the northern High Plains. In general, the heaviest rains fell in four general periods. These were the 4th to 7th, 10th to 13th, 18th, and 21st to 24th. The Plains and some stations in the Trans-Pecos received several inches of snow on the 21st and 22d. The greatest snowfall, 15.0 inches, fell at Eden 1. Many stations received four inches or more of snow in November.

Rain, drizzle, and fog held harvest crews and machinery idle over most of Texas during the first week of November. In many parts of the State, it was the fifth week that bad weather hampered the harvest. In the High Plains a bumper crop of sorghum was threatened by sprouting, mildew, rot, and lodging. Peanuts, still in the ground, were subject to sprouting and rot. Some growers took advantage of the brief clear spell on the 8th and 9th to turn their windrowed peanuts to reduce spoilage and promote drying. In spite of the wet weather, the rice growers pushed their combines through the wet fields to gather the high-yielding crop. Strong winds on November 7 caused some of the rice in the eastern end of the rice belt to lodge. The cotton harvest was limited to the Trans-Pecos and the southern Plains. Losses mounted as freezing temperatures nipped the bolls. Dry, sunny weather was needed for the bo
to open properly. Grades deteriorated as rotting occurr
Unfavorable weather caused migratory workers to ret
home. An acute labor shortage was expected.

High Plains farmers took advantage of the few clear d
at the middle of the month to combine sorghum even tho
the moisture content was too high for safe storage. M
decided the risk of spoilage was less than the risk
further delay.

Rains on the 17th and 18th and snow on the 21st and
caused further delays. Combines ran a day or so in
High Plains but most of the bumper sorghum crop remained
the fields. Cotton pulling increased except when stop
by the rain and snow.

The winter ranges and pastures improved steadily as
rain, drizzle, and snow kept the ground soaked. The abo
seasonal precipitation throughout the fall kept the surf
moisture near saturation, replenished the subsoil moistu
and provided one of the best winter grazing seasons in m
years. Feed supplies, in relation to livestock numbe
were unusually abundant. Small grain pastures, as well
winter grass, were lush and supplied succulent feed.
addition, the rains brought on a second growth of sorg
crop in the central and southern counties. As the H
Plains sorghum was combined, an increasing number of st
ble fields were available for grazing. Also, a well d
tributed record large hay crop was baled. Cattle
calves were in good condition and the demand for repla
ment cattle continued strong as surplus grazing was ava
able over much of the State.

STORMS

Several violent storms caused damage to crops and ot
property in November. A few of the damaging storms
mentioned below. For more details, the reader is refer
to Climatological Data, National Summary.

On November 1, a tornado destroyed or caused extens
damage to about 20 houses in Port Acres, Jefferson Coun
Several tornadoes occurred on the 7th. One of the wo
storms on November 7 completely demolished or caused
tensive damage to 160 houses and several business str
tures in Groves, Jefferson County. Many smaller buildi
were completely destroyed. Several hundred were dama
to a lesser extent. Gas mains were broken. Electric po
was interrupted. Telephone service was disrupted.
persons were killed and several dozen were injured.
storm lasted only a few minutes. On the same evening
tornado caused slight to moderate damage to dwellings
China and Nome, Jefferson County. Also on the same e
ning, a tornado struck Orange, destroyed several busin
buildings, demolished more than a hundred houses and cau
heavy damage to about 250 houses. A hundred families
left homeless. Nine ships and three barges were torn
their moorings. Electric power was disrupted and tho
ands of telephones were without service. One person
killed and more than 80 were injured.

Other windstorms and at least one tornado caused prope
damage on the 17th. Strong winds on the 17th caused pr
erty damage in Lamar and Red River Counties. A tornado
that date caused some damage five miles west of Fort Wor

The first important snowstorm of the season struck nor
west Texas on November 21. Blizzard conditions closed
schools in several towns. Visibility in some places
reduced to zero and many accidents occurred. At least
death and several injuries resulted from collisions.

Strong winds caused extensive damage to crops in Swis
County on the 27th and 29th.

Ø DATA RECEIVED TOO LATE TO BE INCLUDED IN DIVISION MEANS.

A survey has indicated that the comprehensive narrative weather story carried in each issue of Climatological Data is of value to only a small number of recipients. This story will be discontinued, therefore, with the January 1958 issue. A table of extremes will be carried each month and a text will be carried whenever unusual and outstanding weather events have occurred. General weather conditions in the United States for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.

See reference notes following Station Index.

REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the State Climatologist at Weather Bureau Airport Station, 1710 Wilshire Blvd, Austin 2, Texas, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 and on the maps, became effective with data for October 1956.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means for full time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921-1950, adjusted to represent observations taken at the present location.

Water equivalent values published in Table 7 are the water equivalent of snow, sleet or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently, occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record. Water equivalent of snow on the ground is measured at selected stations when two or more inches of snow are on the ground. Entries of Snowfall in Tables 2 and 7, and in the seasonal snowfall table, include snow and sleet. Entires of snow on ground include snow, sleet and ice.

Data in Tables 3, 5 and 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST.

- No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly totals.
+ And also on a later date or dates.
* Amount included in following measurement, time distribution unknown.
# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
[illegible] Gage is equipped with a windshield
AM Data based on observational day ending before noon.
AR This entry in time of observation column in Station Index means after rain.
B Adjusted to a full month.
C In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".
E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing. If average value is entered, less than 10 days record is missing. See Table 5 for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R Amounts from recording gages. (These amounts are essentially accurate but may vary slightly from the amounts to be puslished later in Hourly Precipitation Data.)
T Trace, an amount too small to measure.
Y Includes total for previous month.
SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 25 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annaul Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation History" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data Annual, obtained as indicated above, price 15 cents.

ASHEVILLE: 1958

TEXAS - DECEMBER 1957

WEATHER SUMMARY

Early December was chilly. Two freezes moved southward as far as the Lower Rio Grande. Mild weather prevailed during the last half of the month. December rainfall was light over much of Texas. The open weather was just what Texas farmers needed. Old-timers could not remember such a late harvest season. Farmers rushed the harvest of 1957 crops and hurried to complete the planting of crops for 1958 harvest.

A cold wave on December 1 brought the lowest temperatures of record for so early in the season to many points in the Lower Rio Grande Valley. Another surge of cold air swept southward on December 11 and 12 bringing freezing temperatures to all areas in the State. Almost all stations registered their coldest temperatures for the month on the 1st, 11th, or 12th. The monthly minimum temperatures ranged from slightly above freezing along the Gulf to far below freezing in the northern Panhandle. The coldest temperature for the State, 8° above zero, occurred at Vega on the 11th.

The especially mild days during the first half of December were, in general, the 7th and 10th. Mild weather prevailed on most days from December 14 to the end of the year. Most stations registered their highest temperatures for the month on December 10 or during the period, 14th to 19th. Monthly maximums were in the 70's and 80's at almost all stations. The highest temperature for the State, 88°, occurred at Poteet on the 10th and McCook on the 17th.

Monthly mean temperatures ranged from 40.9° at Stratford to 67.1° at Port Isabel. Monthly mean temperatures averaged several degrees above their long-term means over the northern sections. They averaged slightly above the long-term means over the southern sections and along the Gulf.

Light to moderate showers fell along the Coast and widely scattered showers over some other parts of Texas on December 6 and 7. Heavier showers fell over the coastal areas on the 24th and 25th. Monthly totals ranged widely. Many stations over the Plains, the Trans-Pecos, and the Edwards Plateau received no rain or only a few sprinkles. Few stations in those sectio
received more than one-half inch. Totals e
ceeded two inches over most of east Texas a
at a number of scattered stations. The greate
amount, 4.59 inches, fell at Warren. The month
totals at most stations were less than half the
long-term December means. Numerous stations o
the Plains and the Trans-Pecos received less t
one-fourth of their long-term means.

The long spell of rainy weather, from early S
tember to near the end of November, had dela
the harvest of fall crops and caused serious c
losses. The mild open weather in December
just what the Texas farmers needed to rush th
harvest to completion. As soon as the gro
dried enough to support the machinery and to
tilled, the growers resumed the planting
wheat, oats, and barley. The cool weather d
ing the first part of December slowed the gro
of the late planted acreage but, in gener
small grain prospects seldom looked more prom
ing. Subsoil moisture was ample in all pa
of the State. Some of the eastern count
needed more sunshine.

It was estimated that the cold temperatures
December 12 would reduce the production of w
ter vegetables in the Lower Valley by abou
percent. Mild weather during the last half
December enabled most of the acreage to mak
partial recovery.

Grass and weeds made good growth in most of
ranges and pastures. This feed plus the sm
grains, stubble fields, cured grass, and an
hay was expected to be sufficient to last
ing the winter.

Strong gusty winds caused minor damage in
Dallas area on the afternoon of the 19th.
companying dust reduced visibility to one-
mile.

Lucius W. Dye
Climatologist
Weather Records Processing Ce
Kansas City, Missouri

A survey has indicated that the comprehensive narrative weather story carried in each issue of Climatological Data is of value to only a small number of recipients. This story will be discontinued, therefore, with the January 1958 issue. A table of extremes will be carried each month and a text will be carried whenever unusual and outstanding weather events have occurred. General weather conditions in the United States for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.

MAX AND MIN IN TABLE 6 REFER TO EXTREMES OF TEMPERATURE OF WATER IN PAN AS RECORDED DURING THE 24 HOURS ENDING AT TIME OF OBSERVATION.
(A) EVAPORATION MEASURED IN A SUNKEN PAN OF 24-INCH DIAMETER.

REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the State Climatologist at Weather Bureau Airport Station, 1710 Wilshire Blvd, Austin 2, Texas, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 and on the maps, became effective with data for October 1956.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921-1950, adjusted to represent observations taken at the present location.

Water equivalent values published in Table 7 are the water equivalent of snow, sleet or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record. Water equivalent of snow on the ground is measured at selected stations when two or more inches of snow are on the ground. Entries of Snowfall in Tables 2 and 7, and in the seasonal snowfall table, include snow and sleet. Entires of snow on ground include snow, sleet and ice.

Data in Tables 3, 5, and 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly totals.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AM	Data based on observational day ending before noon.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".
D	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; if average value is entered, less than 10 days record is missing. See Table 5 for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be puslished later in Hourly Precipitation Data.)
T	Trace, an amount too small to measure.
V	Includes total from previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annaul Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

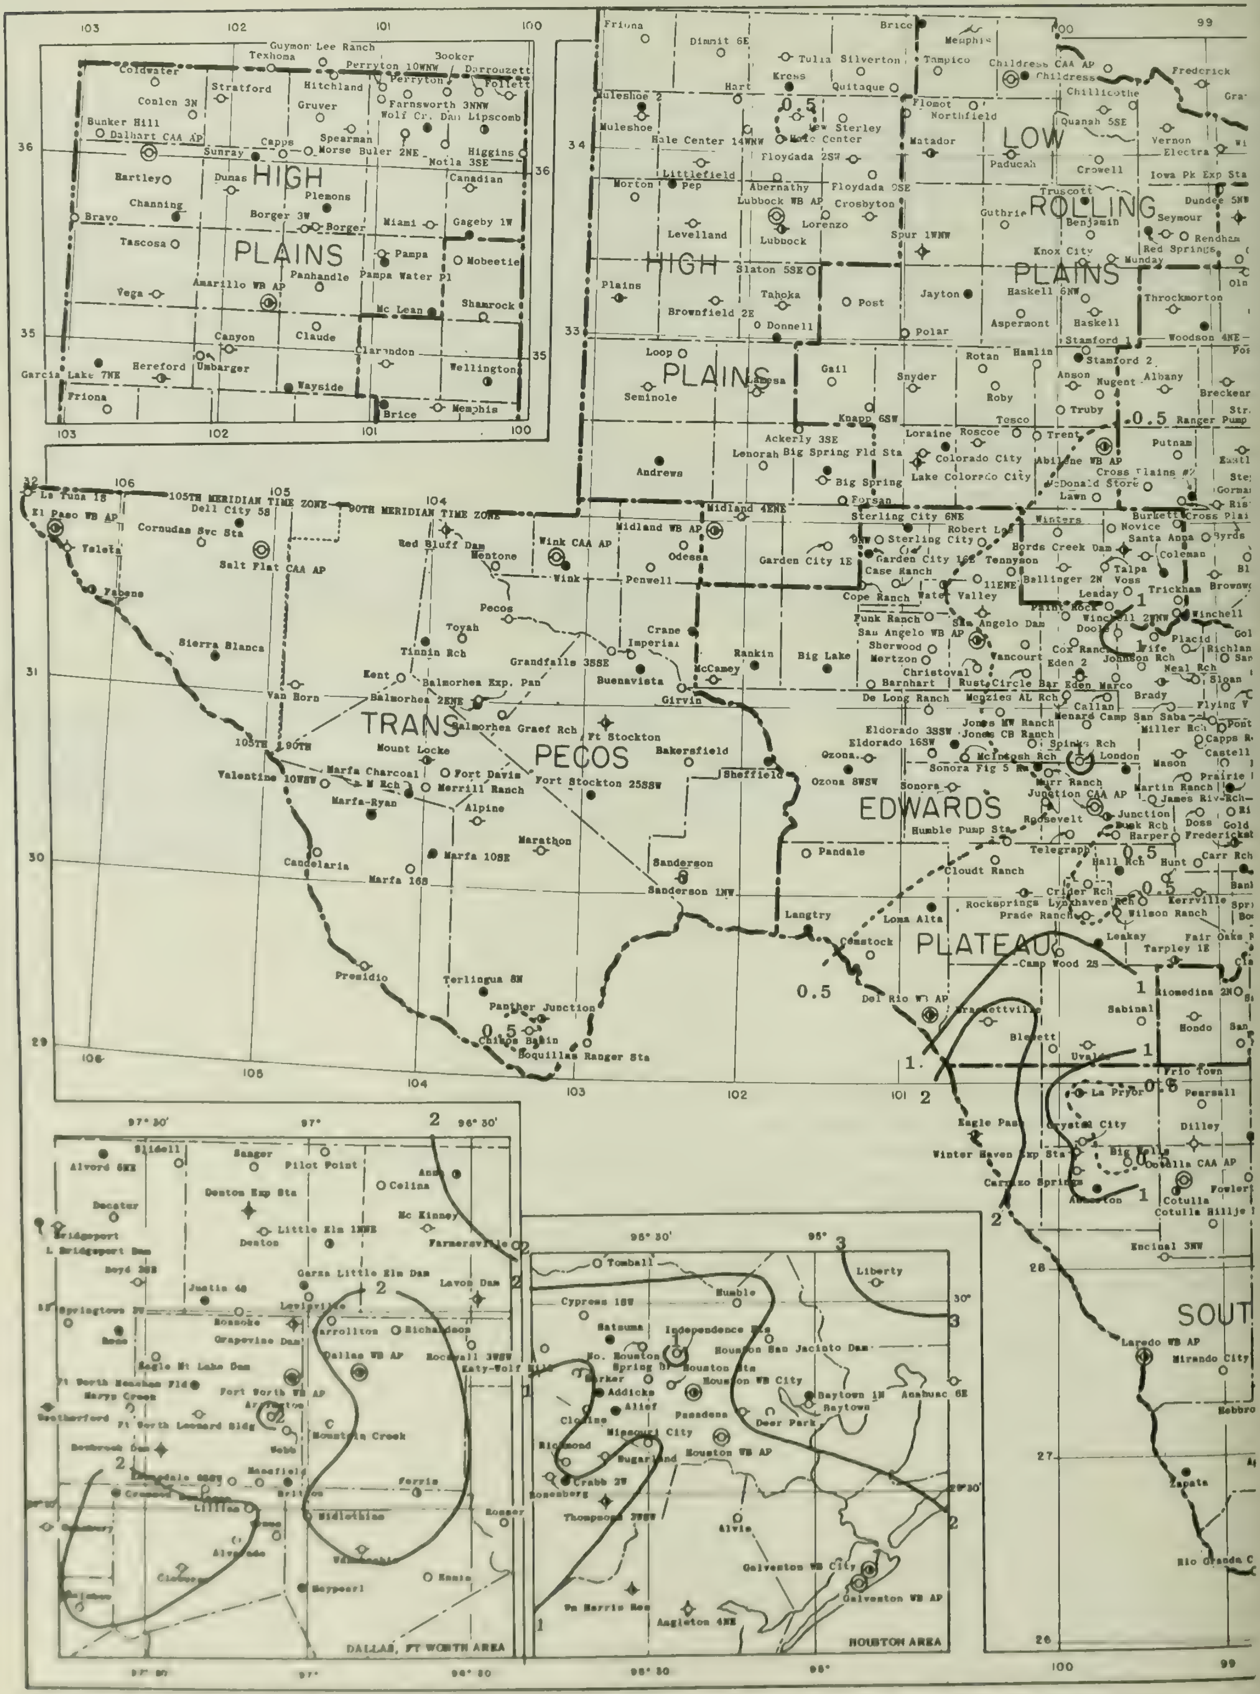
Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation History" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data Annual, obtained as indicated above, price 15 cents.

USCOMM-WB-Asheville -- 2-7-58 -- 1650

CORRECTIONS

June 1951:	Balmorhea Exp Pan, Delayed Data Table 2, mean temperature for November 1950 should be 56.7.
January 1957:	Brownsville WB AP, Table 2, precipitation departure should be -1.08.
February 1957:	Brownsville WB AP, Table 2, temperature departure should be +5.2 and precipitation departure +4.02.
March 1957:	Brownsville WB AP, Table 2, temperature departure should be +1.7.
April 1957:	Lindale 5 SE, Table 2, precipitation departure should be +11.04.
May 1957:	McKinney, Table 2, precipitation departure should be +7.18.
September 1957:	Graham, Table 2, precipitation departure should be +0.64.
November 1957:	Gilmer 2 S, Table 2, temperature departure should be -2.6.

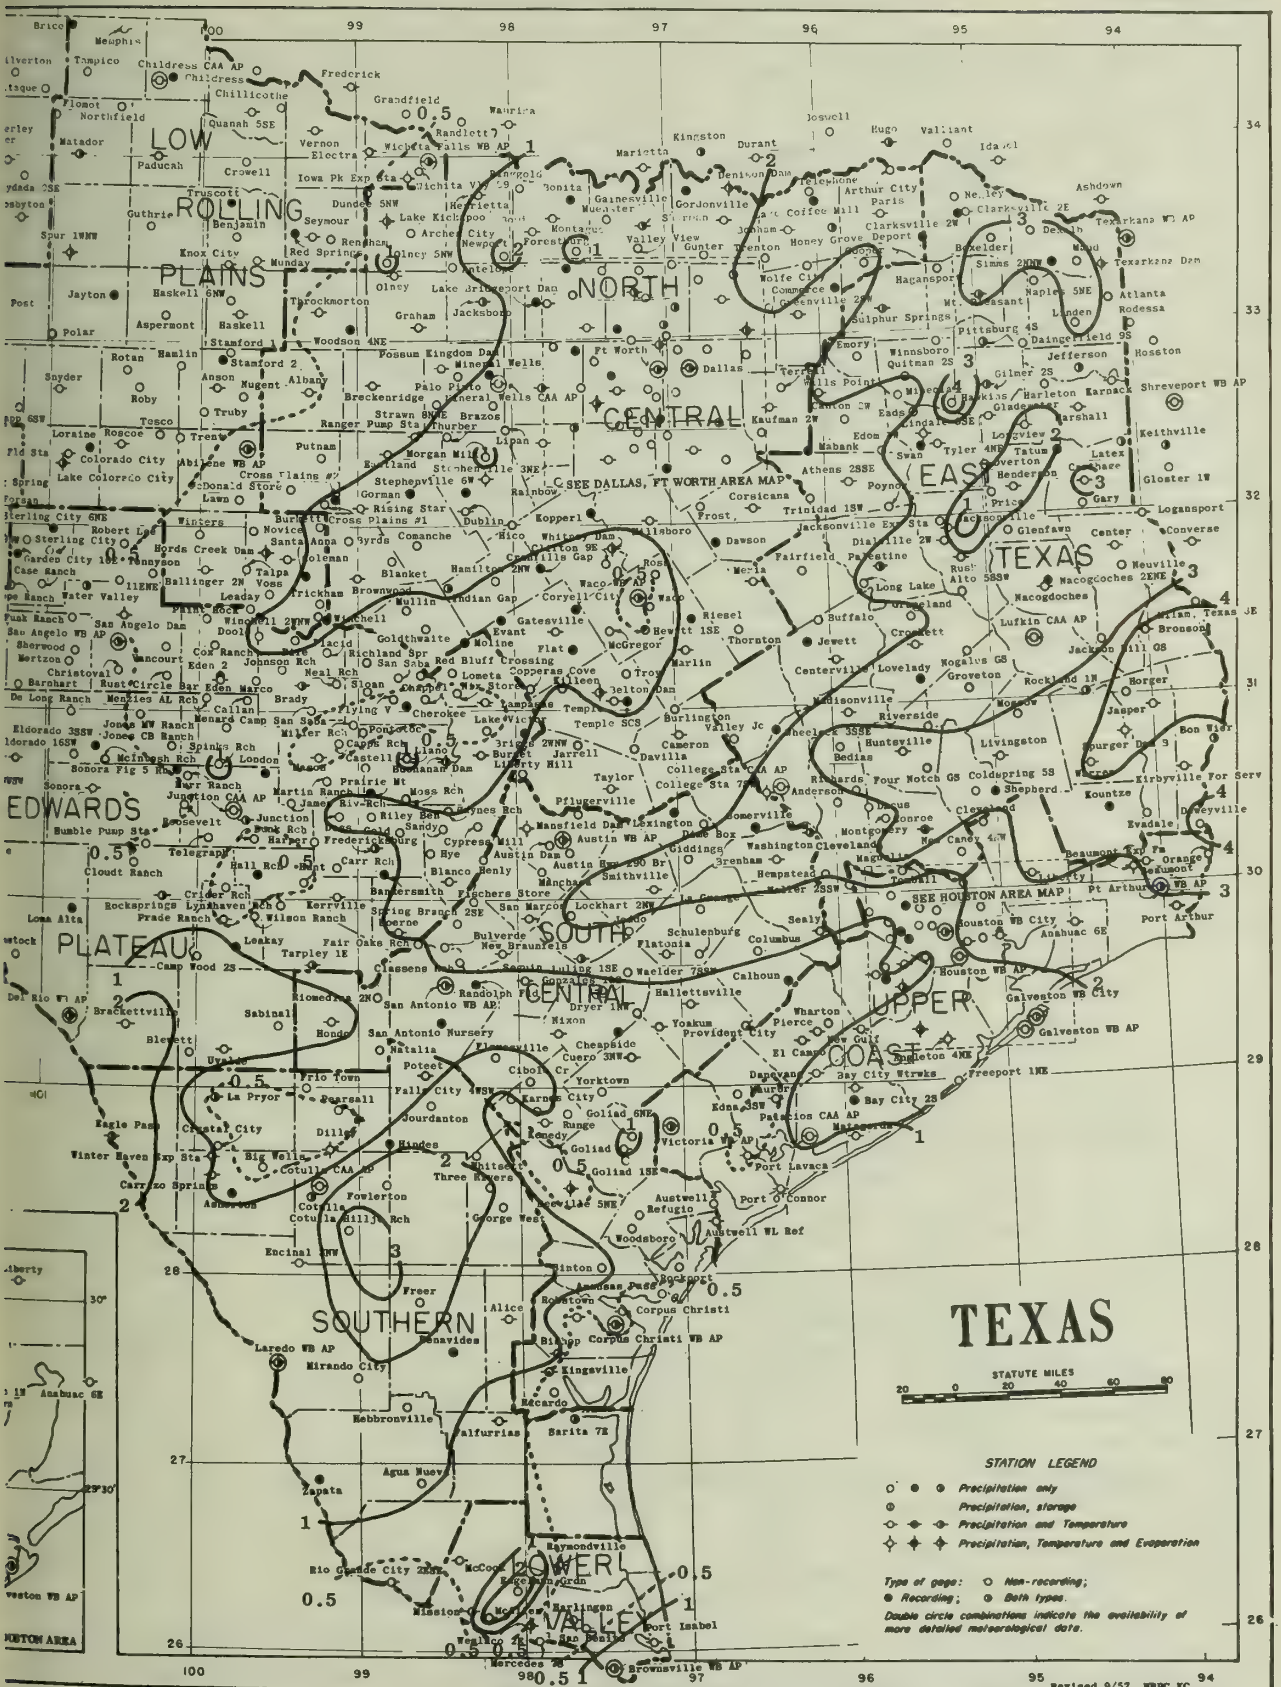
TOTAL PRECIPITATION



Isolines are drawn through points of approximately equal values. Hourly Precipitation data from recorder substations will be available in the publication "Hourly precipitation Data".

TOTAL PRECIPITATION

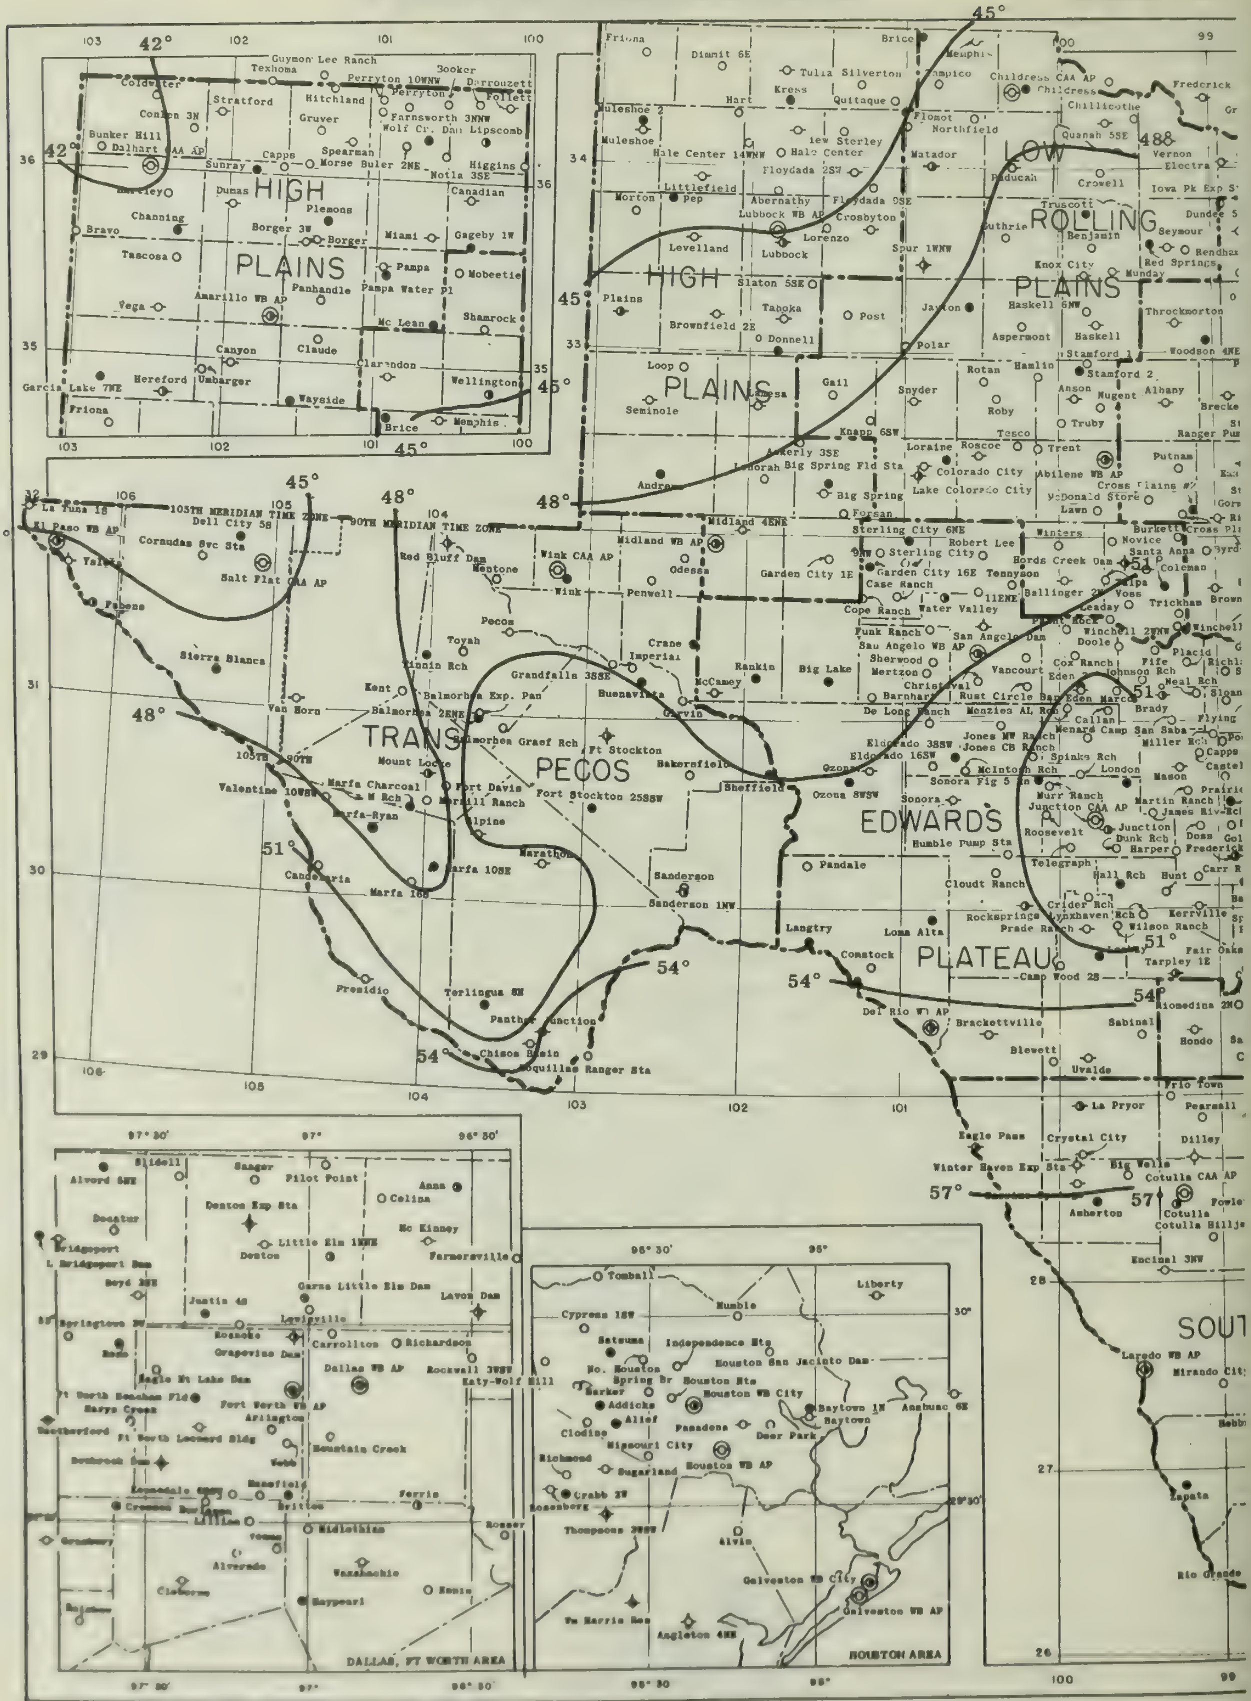
DECEMBER 1957



Isolines are drawn through points of approximately equal values. Hourly precipitation data from recorder substations will be available in the publication "Hourly Precipitation Data".

AVERAGE TEMPERATURE

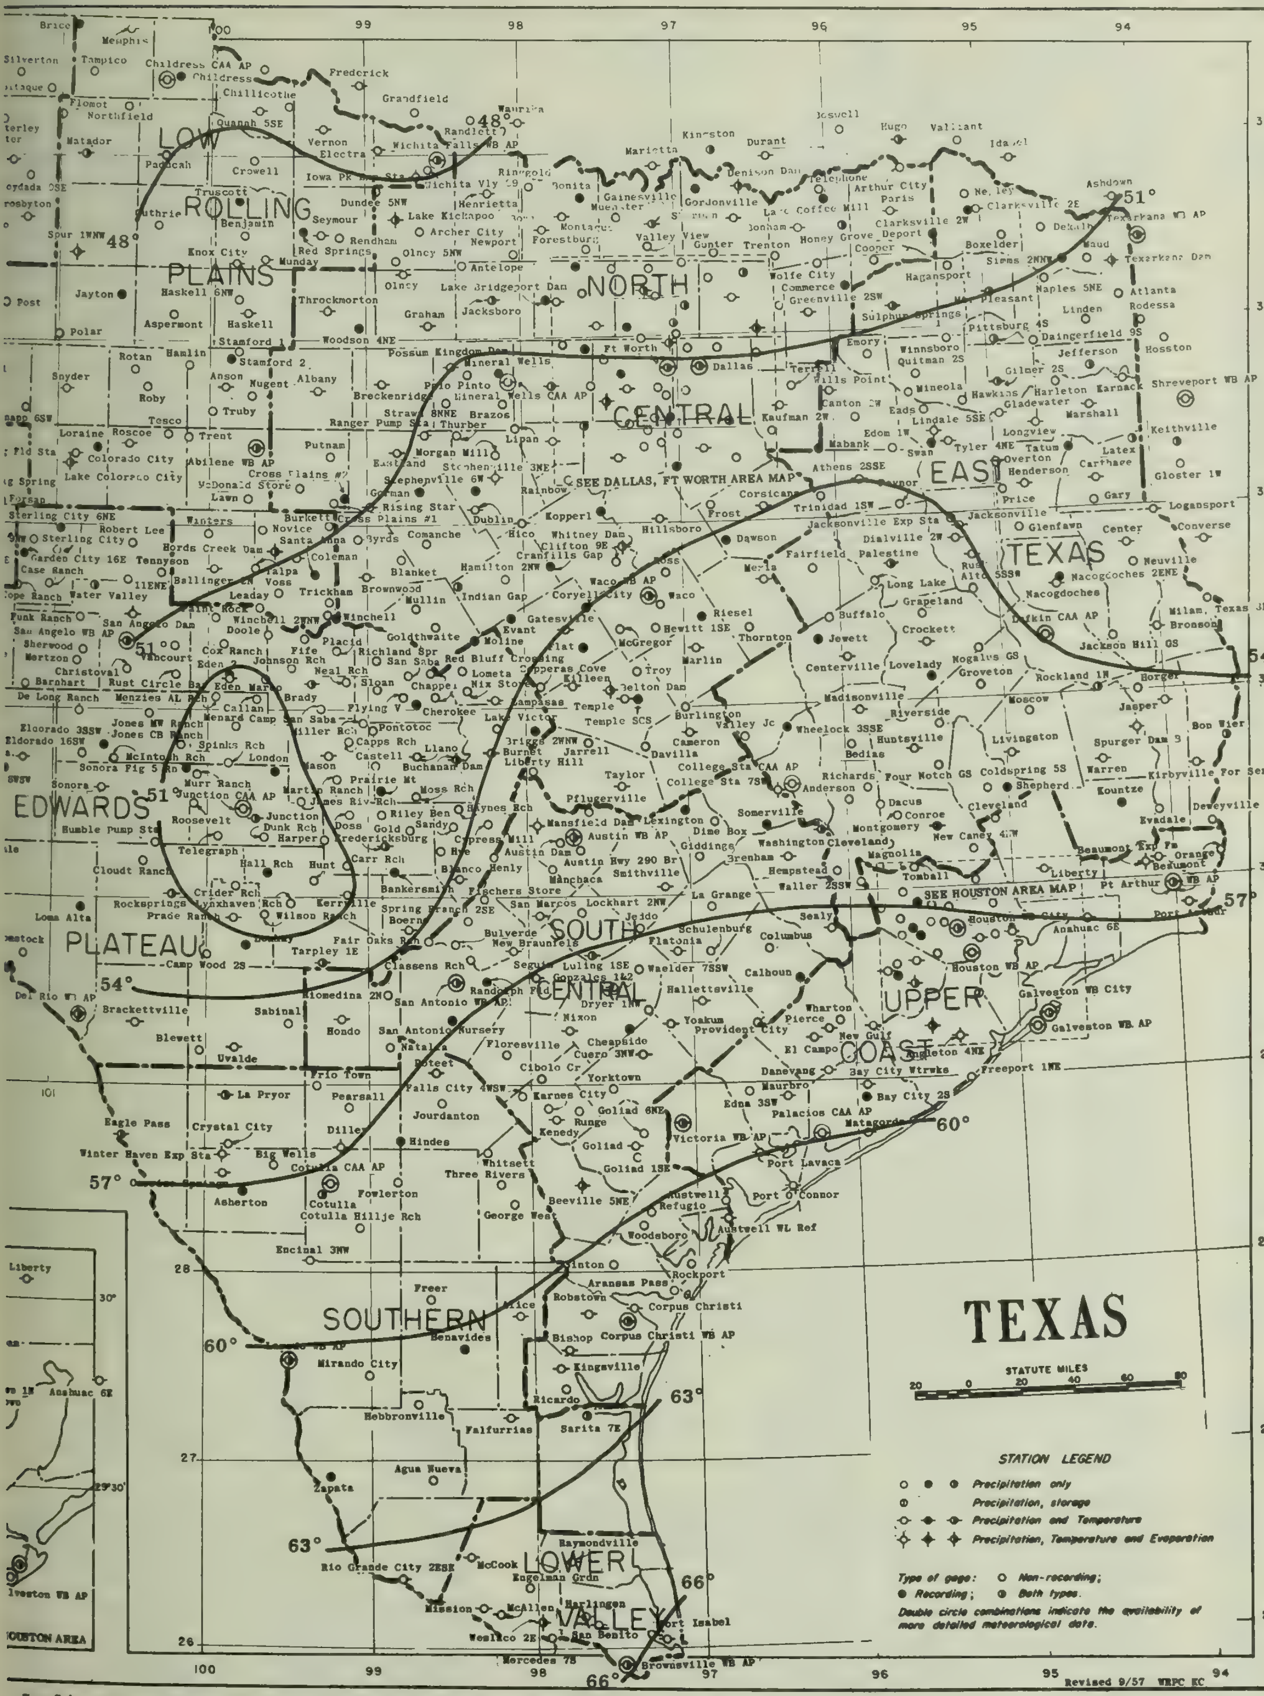
DECEMBER 1957



Isolines are drawn through points of approximately equal values.

AVERAGE TEMPERATURE

DECEMBER 1957



Isolines are drawn through points of approximately equal values.

ANNUAL SUMMARY 1957
Volume LXII No. 13

ASHEVILLE: 1958

WEATHER SUMMARY

The big story in 1957 was the end of one of the worst droughts of record. The drought, which had been in progress in the Plains States from Nebraska southward for several years, had intensified in 1956. The area affected included most of the nonirrigated crop lands of Texas. Wheat and other small grains had been "dusted in" in the fall of 1956. Many acres failed to germinate until February. To everyone's surprise, much of this seed produced crops. Rains ranging from slow soakers to old-fashioned gully washers began in March and continued to June. Late summer weather was ideal for haying and harvesting small grain. Fall rains delayed the harvest of late-maturing crops. The freezing temperatures from October 26 to 28 ended the growing season as far south as Del Rio. Farmers in 1957 produced record-high yields of grain sorghum, rice, and hay and the cotton yield was the highest in more than 90 years. Texas will long remember 1957 as the season which broke seven years of drought.

January was the coldest month in 1957 at most stations. Temperatures over all divisions except the Lower Valley averaged slightly lower in January than in December. The temperatures over the Lower Valley averaged slightly lower in December than in January. The second cold, dry norther of the year, which whistled downstate in the middle of January, brought the coldest temperatures of the year to most stations over the Edwards Plateau, the eastern portion of the Trans-Pecos, the Low Rolling Plains, north central Texas, and the northern counties of east Texas. Almost all stations in those areas registered their lowest temperatures on January 17 or 18. At the end of the third week of November, strong northerly winds brought unseasonally cold weather to the entire State. Stations in the western portion of the Trans-Pecos and the western part of the Panhandle registered their lowest temperatures for the year on November 23. The lowest minimum temperatures for the year over the southern counties of east Texas and over the Upper Coast, south central Texas, southern Texas, and parts of the Lower Valley occurred on December 12. Annual minimum temperatures were below freezing at all stations except Brownsville and Port Isabel. The coldest temperature for the State, 2° below zero, occurred at Plains on November 23.

Temperatures in July, the warmest month, averaged slightly higher than in August. Temperatures reached 90° or higher somewhere in the State in every month except December. They reached 100° or higher in every month from April to October. Most stations over the Trans-Pecos and the High Plains registered their highest temperature for the year in June. Stations near the Coast, from Palacios to San Benito registered their annual maximum temperatures in August. Elsewhere over the State, most stations registered their highest temperatures in July. The highest temperature for the State, 117°, occurred at Presidio on June 28.

Annual mean temperatures ranged from 55.0° at Pampa to 75.9° at Harlingen. Temperatures averaged slightly below the long-term means at most stations. The annual temperature departures ranged from -2.9° at Follett to +2.1° at Harlingen.

Precipitation was unevenly distributed. Precipitation totals ranged from 4.38 inches at Presidio to 84.52 inches at Glenfawn. Most stations west of 100° longitude received less than 30 inches. Most stations east of the 100° meridian received more than 30 inches. Most areas received their greatest monthly totals in April, May, October, or November. The greatest monthly total, 20.48 inches, fell at Glenfawn in April. Almost all of that amount fell during the last half of April. Many stations received half of their annual totals in April and May.

The annual rainfall over most of Texas exceeded the long-term means. The areas where less than usual rain occurred were the western High Plains, the Trans-Pecos, and parts of the Lower Valley and southern Texas. Numerous widely scattered stations exceeded their long term means by 50 percent. Some of these were La Pryor, San Antonio AP, Kerrville, Tyler 4NE, and Valley View.

Drought breaking rains began in February, increased in March, and continued to June. Torrential rains in April and May, accompanied by driving winds, flattened the small grain crops in northern and central Texas. The rains flooded the lowlands and caused serious planting delays. Cotton farmers, sometimes after several replantings, managed to get stands on most of their intended acreage.

Topsoil moisture evaporated rapidly in July and only counties drenched by Hurricane Audrey had much moist in the subsoil. Showers over the High Plains gave d land crops a boost. Crop prospects became more promis than in many years. The July and August weather was id for haying and harvesting small grains. Farmers ba their second and third cuttings of hay. Combining underway in the Austin area and progressed northwa Corn picking started in the eastern counties in late J and, by September 1, corn picking was well underway north and east Texas. Cotton opened and picking bec active as far north as Waco. As the harvest moved nor ward, it became increasingly evident that 1957 was a b ner year for Texas farmers. Record-high yields were prospect for sorghum, peanuts, cotton, rice, and po toes. The hay crop was the second largest of reco

Rain and high humidity in October held the fall harv at a standstill. The rainy weather kept the cotton cr out of the fields and delayed the combining of the bum sorghum crop on the High Plains. The rains continued November and the bad situation became worse.

Freezing temperatures on October 26 ended the growing s son abruptly as a cold norther swept downstate. By Octo 28, the cold air mass brought freezing temperatures as south as Midland, Del Rio, San Marcos, and Livingst Freezing temperatures usually occur over the northern H Plains by the end of October but do not usually occur o the south central counties until near the end of Novemb

Early-planted and volunteer wheat, oats, and barley got to an unusually good start. Many fields made rank grow especially the fields where grazing was not permitted cause of Soil Bank agreements.

December's fair weather was exactly what the Texas farm needed. The long siege of wet weather had lasted from S tember to November, had delayed the harvest of late f crops, and had caused serious crop losses, especially c the northern half of the State. Little rain of importa fell in December to cause further delays. Old-timers co not remember such a late harvest season in Texas. Dur the last week of December, gins on the High Plains op ated at full capacity and cotton growers in the lowla of north Texas were still scrapping fields. By the enc the year, all the sorghum was harvested. Storage faci ties at some places were inadequate to handle the rec crop. Some of the grain had to be piled on the grou

Two freezes in December extended all the way to the Lo Rio Grande. The first, on December 1, brought record temperatures for so early in the season to several poi in the Lower Valley. The second, on December 12, brou freezing temperatures to the entire State. Temperatu at several points in the Lower Valley dropped to the twenties. During the mild weather in the last half of cember, the farmers hurried to complete the drillin wheat, oats, and barley as soon as the fields dried en to support the machinery. Seldom had small grain p pects looked more promising than at the end of 1957.

The short supply of water for irrigation in the wi months of 1956-1957 reduced the winter vegetable acr in the Lower Valley. Irrigated areas outside the Va increased plantings. Unfavorable weather throughout growing season reduced the yields of most vegetable cr In north Texas, wet fields prevented the harvest of ions and a considerable acreage was abandoned. Low peratures over south Texas ended the harvest of te vegetables on December 1.

STORMS

Among the most severe storms in 1957 were the follow

March 17, evening, Galveston County: A series of t derstorms included small twisters. Winds caused siderable damage. Most of the damage resulted from fl ing caused by up to 13 inches of rain.

March 22 to 25, Panhandle: One of the worst spring b zards of record roared across the western Plains Colorado and western Nebraska southward to the Texas handle. Winds up to 80 miles per hour drifted the s halted all transportation, marooned about 4,000 pers and caused heavy losses of livestock.

CHANGES IN STATION NAMES

NEW NAME	FORMER NAME	DATE
Blewett	Cline	May
Boyd 3 SE	Boyd	April
Gail 5 ENE	Gail	September
Hamilton 2 NW	Hamilton	January
Jourdanton 4 SSE	Jourdanton	December
Quitman 2 S	Quitman	July
Simms 2 NNW	Simms	February
Springtown 3 W	Poolville	April
Sterling City 9 NE	Sterling City 6 NE	October
Thurber 5 NE	Thurber	November

RELOCATION AND CHANGES OF EQUIPMENT

Blewett	Rain gage moved 5 miles SE from Cline	May 15
Boyd 3 SE	Rain gage moved 3 miles SE and temperature equipment installed	April 18
Brackettville	Temperature equipment installed	March 27
Brackettville	Equipment moved 0.5 mile SE	July 31
Camp San Saba	Rain gage moved 150 feet E	October 12
Carrollton	Rain gage moved 2 miles ESE	August 12
Castell	Rain gage moved 150 feet S	October 11
Christoval	Rain gage moved 0.9 mile E	June 20
Columbus	Rain gage moved 0.4 mile WSW	September 1
Cooper	Rain gage moved 300 feet SE	June 21
Eastland	Equipment moved 0.85 mile NW	January 18
Electra	Recording gage removed	August 24
Fowlerton	Rain gage moved 1000 feet S and temperature equipment installed	December 10
Frost	Rain gage moved 20 feet N	November 1
Gail 5 ENE	Rain gage moved 5.3 miles ENE	September 6
Hamilton 2 NW	Rain gage moved 2.2 miles NW	January 16
Henrietta	Equipment moved 0.3 mile N	June 18
Humble Pump Sta	Rain gage moved 1/4 mile NE	November 3
Hye	Rain gage moved 20 feet S	October 10
Jourdanton 4 SSE	Rain gage moved 4 miles SSE	December 16
Kenedy	Equipment moved 0.4 mile S	November 20
Killeen	Temperature equipment installed	April 1
Lindale 5 SE	Recording gage removed	August 8
Madisonville	Equipment moved 1100 feet NE	September 12
Merrill Ranch	Rain gage moved 50 feet SE	April 6
Mission	Equipment moved 0.7 mile W	July 27
Natalia	Temperature equipment installed	September 25
Nixon	Equipment moved 350 feet ESE	January 15
Ozona 8 WSW	Recording gage moved 500 feet NE	March 29
Palestine	Equipment moved 2.3 miles SW	May 28
Palo Pinto	Rain gage moved 4.2 miles SSE	August 22
Perryton	Rain gage moved 8 blocks S	December 3
Plemons	Recording gage moved 100 feet E	September 1
Quitman 2 S	Rain gage moved 0.6 mile N	July 12
Refugio	Temperature equipment installed	December 6
Rising Star	Equipment moved 125 feet NE	October 14
Sanderson	Temperature equipment & standard gage installed	April 1
Seminole	Equipment moved 0.9 mile S	January 1
Simms 2 NNW	Recording gage moved 1.8 miles N	February 9
Sinton	Temperature equipment installed	December 7
Springtown 3 W	Rain gage moved 7 miles E from Poolville	April 26
Sterling City 9 NE	Recording gage moved 3.7 miles E	October 18
Stratford	Equipment moved 0.4 mile ESE	January 21
Three Rivers	Rain gage moved 1 mile N	January 4
Thurber 5 NE	Rain gage moved 4.8 miles NE	November 6
Van Horn	Equipment moved 150 feet N	October 28
Vega	Equipment moved 0.2 mile N	April 1

STORMS (Continued)

March 27, afternoon, Waco vicinity: Hail with wind up to about 74 miles per hour, damaged roofs, windows, automobiles, exterior paint, shrubs, and gardens.

April 2, afternoon, Dallas: A tornado struck the western portion of the city, killed several persons, injured many persons, damaged or destroyed several hundred buildings, disrupted electricity in 75,000 homes, and disrupted telephone service in 4,000 homes.

April 26, morning, Tyler: A tornado struck the residential district and damaged one church, three schools, and several hundred residences. The storm was accompanied by heavy rain.

May 15, late evening, Silverton: A tornado leveled a new residential district. More than a score of persons were killed and about 80 were injured. At least 25 houses were totally destroyed.

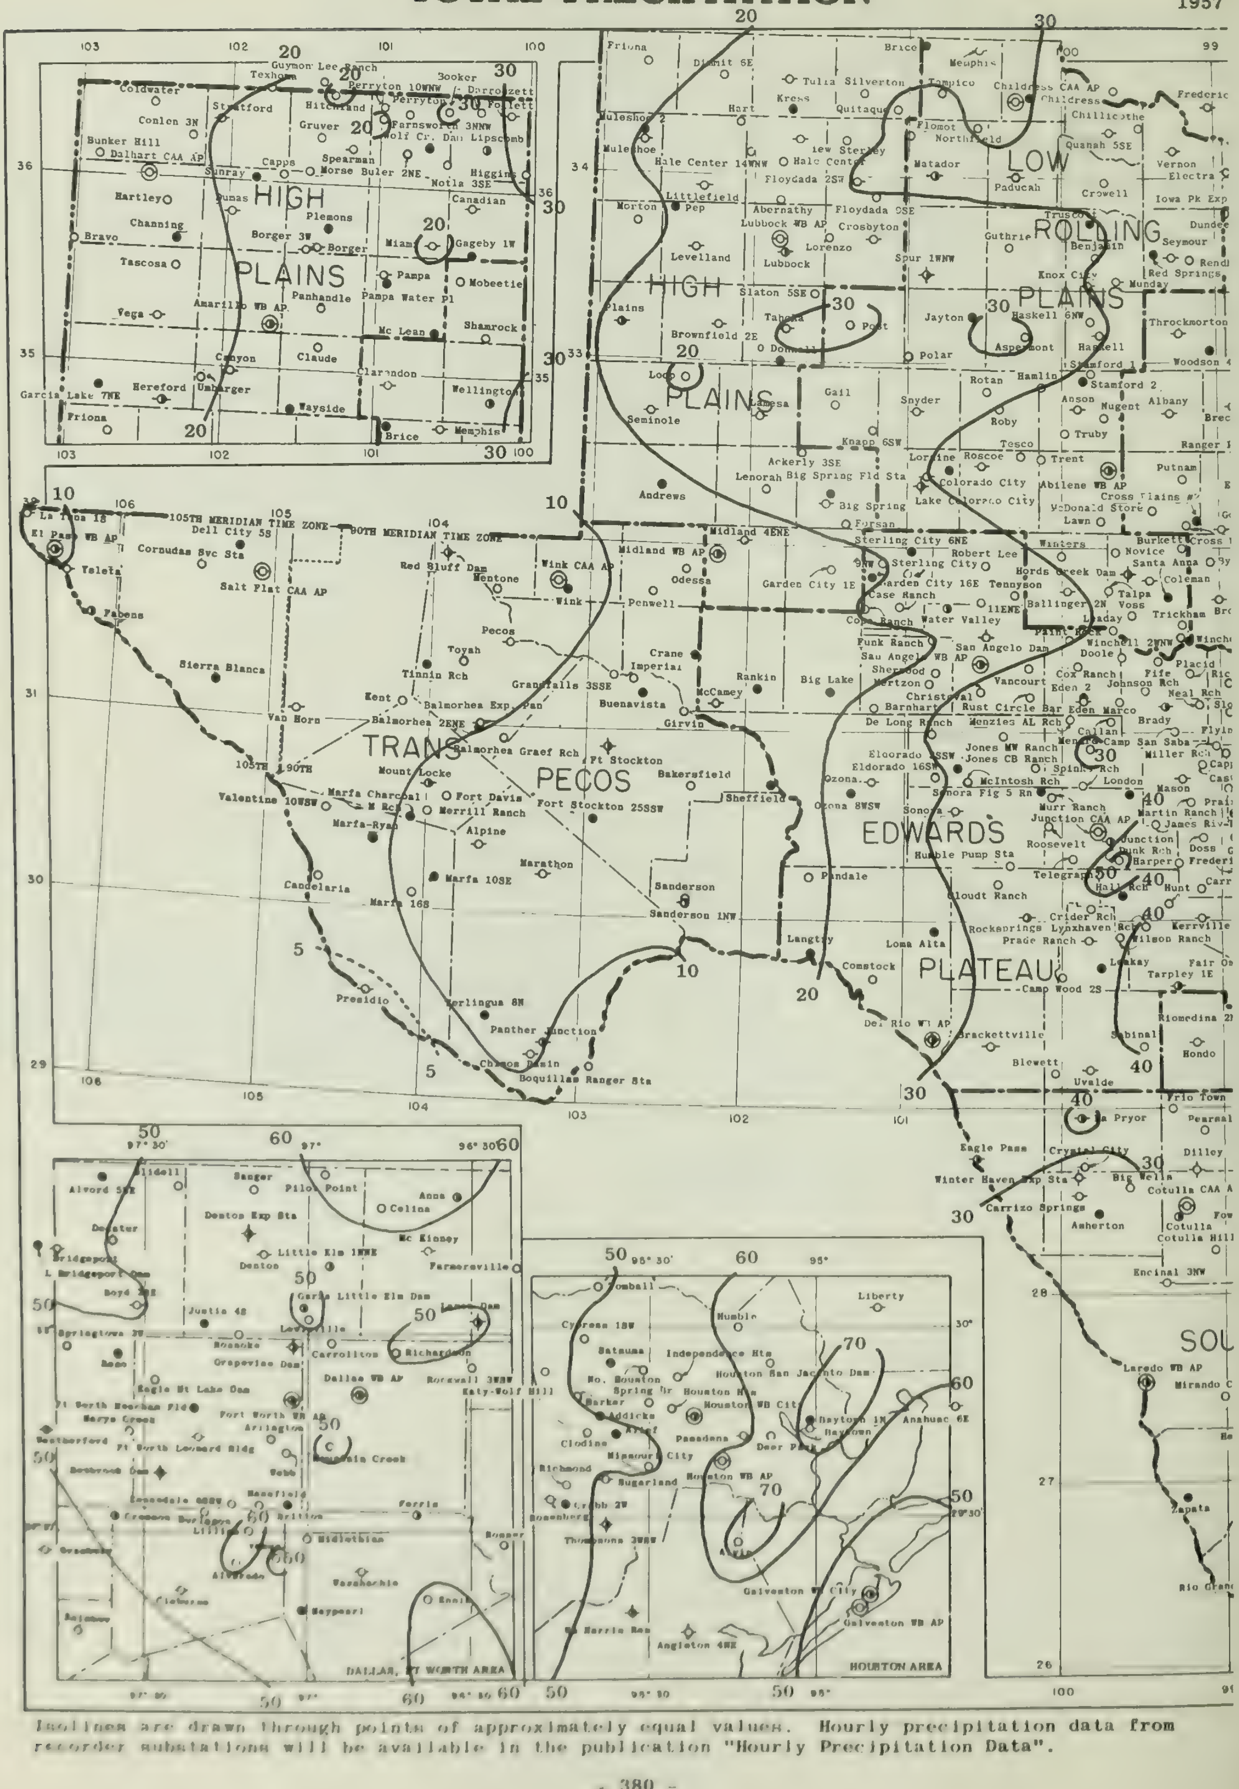
September 13, late afternoon and evening, Muleshoe to Kress: Severe hailstorm damaged cotton 50 percent to 100 percent, grain sorghum up to 50 percent, and stripped forage crops along an 80-mile path.

September 21 - 22: Heavy rains damaged rice fields in Harris, Brazoria, Chambers, Liberty, Jefferson, Colorado, and Matagorda Counties.

For more information about the many severe storms that caused damage to crops or property and injuries to persons, the reader is referred to the monthly issues of Climatological Data, Texas Section, and Climatological Data, National Summary. To find more information about the damage caused by the extensive blizzard of March 22 to 25 in Texas and other States, the reader is referred to Weekly Weather and Crop Bulletin, National Summary for week ending March 25 and for week ending April 1, 1957.

Lucius W. Dye
Climatologist
Weather Records Processing Center
Kansas City, Missouri

TOTAL PRECIPITATION



Isolines are drawn through points of approximately equal values. Hourly precipitation data from recorder substations will be available in the publication "Hourly Precipitation Data".

REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the State Climatologist at Weather Bureau Airport Station, 1710 Wilshire Blvd., Austin 2, Texas, or to any Weather Bureau Office near you.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

Climatological divisions, outlined on the maps in this bulletin, became effective with data for October 1956.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.

-	No record
+	Also later date (dates) or months.
*	Amount included in following measurement.
V	Includes total for previous month. V in annual column means total is for a two-year period.
//	Gage is equipped with a windshield.
#	Thermometers are generally exposed in a shelter located a few feet above sod covered ground; however the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
B	Adjusted to full month.
C	Data for recorder stations denoted by "C" in the Refer to Tables column of the Station Index are processed for special purposes and published in "Hourly Precipitation Data". Length of record for recorder-only stations may be found in the annual issue of "Hourly Precipitation Data".
E	Amount is wholly or partially estimated.
M	One or more days' record missing; if average value is entered, less than 10 days record is missing. See monthly Climatological Data for detailed daily record.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
T	Trace, an amount too small to measure.

Information concerning the history of changes in location, elevations, exposures, etc., of substations through 1955 may be found in the publication "Substation History" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., for $1.00. Similar information for regular Weather Bureau stations may be found in the latest issue of Local Climatological Data annuals, obtained as indicated above, price 15 cents.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

DATA RECEIVED TOO LATE TO BE INCLUDED IN DIVISION MEANS.

Highest Temperature 86 on the 31 at Rio Grande City 2 ESE.

Lowest Temperature 8 on the 22 at Stratford.

Greatest Total Precipitation 12.53 inches at Kingsville.

Least Total Precipitation T inches at Bunker Hill.

Greatest one-day precipitation 6.00 inches on the 5 at Corpus Christi.

Greatest Total Snowfall 20.5 inches at Mount Locke.

Deepest Snow on Ground 14 inches on the 5 at Plainview.

STORMS

A closed low pressure area over northern Mexico on January 4 brought extensive snow swirling through the Trans-Pecos area. The snowstorm expanded into the southern High Plains, Low Rolling Plains and tapered off in the northern High Plains on the 5th.

Some snow accumulations were:

Place	Snow Depth	Date
Abernathy	12 inches	5
Alpine	8 1/2 inches	6
Brownfield	8 inches	5
Clarendon	4 1/2 inches	5
Crosbyton	6 inches	5
Floydada	4 1/2 inches	5
Levelland	12 inches	5
Plainview	13 1/2 inches	5
Quitaque	8 inches	5
Seminole	11 inches	5
Silverton	10 inches	5

The southern edge of the storm brought heavy rains to the Lower Rio Grande Valley and Coastal Bend areas on the 4th, 5th, and 6th as it moved east.

Heaviest rains, more than four inches, fell in the Lower Valley on the 4th. Three-day totals at many coastal stations were in excess of seven inches.

Richard D. W. Blood
State Climatologist
U. S. Weather Bureau
Austin, Texas

See reference notes following Station Index.

See reference notes following Station Index.

REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the State Climatologist at Weather Bureau Airport Station, 1710 Wilshire Blvd, Austin 2, Texas, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table and on the maps, became effective with data for October 1956.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921-1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the seasonal snowfall table include snow and sleet. Entries of snow on ground include snow, sleet and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and CAA Stations. For those stations snow on ground values are at 0600 C.S.T.

In the Station Index the letters C, H, and J in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C	Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes and are published later in "Hourly Precipitation Data" Bulletin.
H	"Snowfall and Snow on Ground" Table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
J	"Supplemental Data" Table.

Other Reference Notes

	No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.
	Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.
-	No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.
+	And also on an earlier date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
AM	Data based on observational day ending before noon.
B	Adjusted to a full month.
D	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
SS	This entry in time of observation column in Station Index means observation made near sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation History" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data Annual, obtained as indicated above, price 15 cents.

USCOMM-WB-Asheville -- 3-19-58 -- 1650

TOTAL PRECIPITATION

See reference notes following Station Index.

REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the State Climatologist at Weather Bureau Airport Station, 1710 Wilshire Blvd, Austin 2, Texas, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table and on the maps, became effective with data for October 1956.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921-1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the seasonal snowfall table include snow and sleet. Entries of snow on ground include snow, sleet and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and CAA Stations. For those stations snow on ground values are at 0600 C.S.T.

In the Station Index the letters C, H, and J in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes and are published later in "Hourly Precipitation Data" Bulletin.
H "Snowfall and Snow on Ground" Table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
J "Supplemental Data" Table.

Other Reference Notes

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.
Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.
- No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.
+ And also on an earlier date or dates.
* Amount included in following measurement, time distribution unknown.
# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
// Gage is equipped with a windshield.
AR This entry in time of observation column in Station Index means after rain.
AM Data based on observational day ending before noon.
B Adjusted to a full month.
D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
SS This entry in time of observation column in Station Index means observation made near sunset.
T Trace, an amount too small to measure.
V Includes total for previous month.

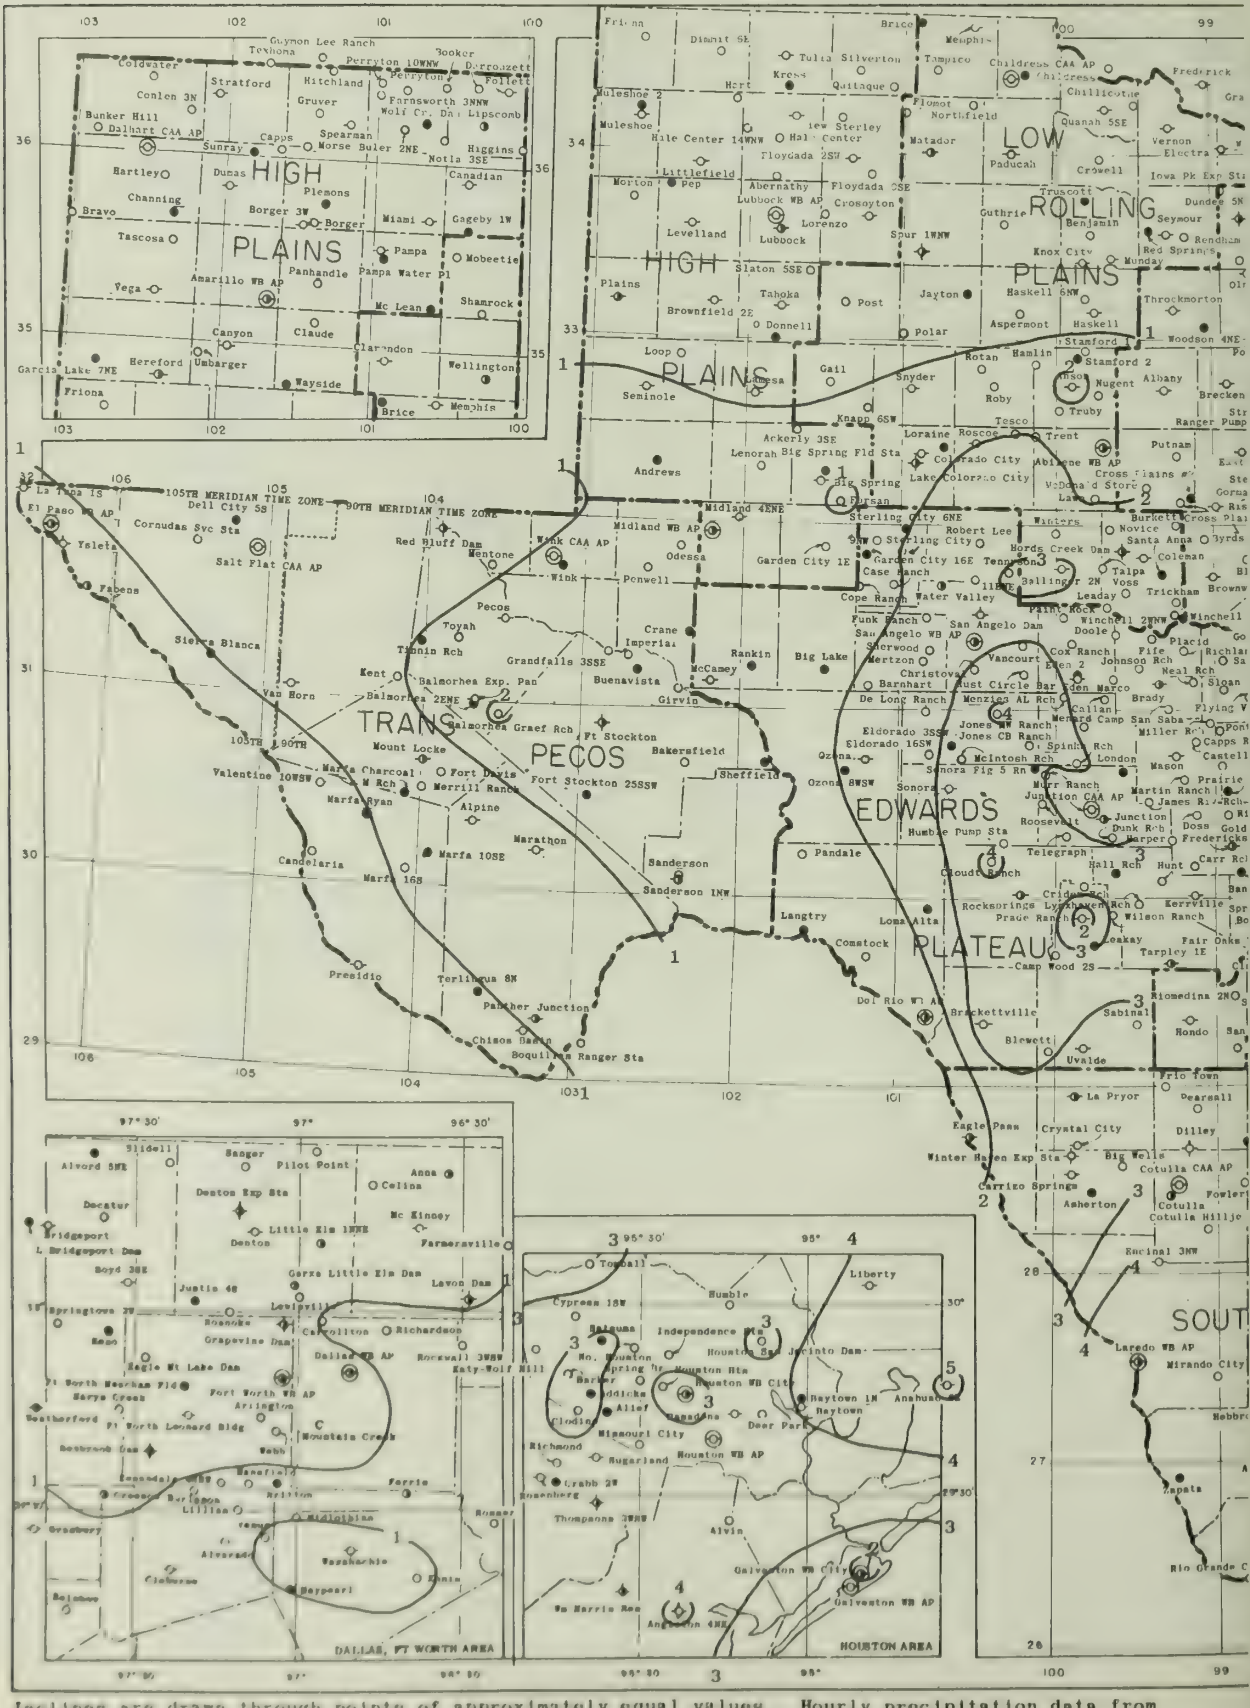
Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation History" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data Annual, obtained as indicated above, price 15 cents.

USCOMM-WB-Asheville -- 4-8-58 -- 1650

TOTAL PRECIPITATION

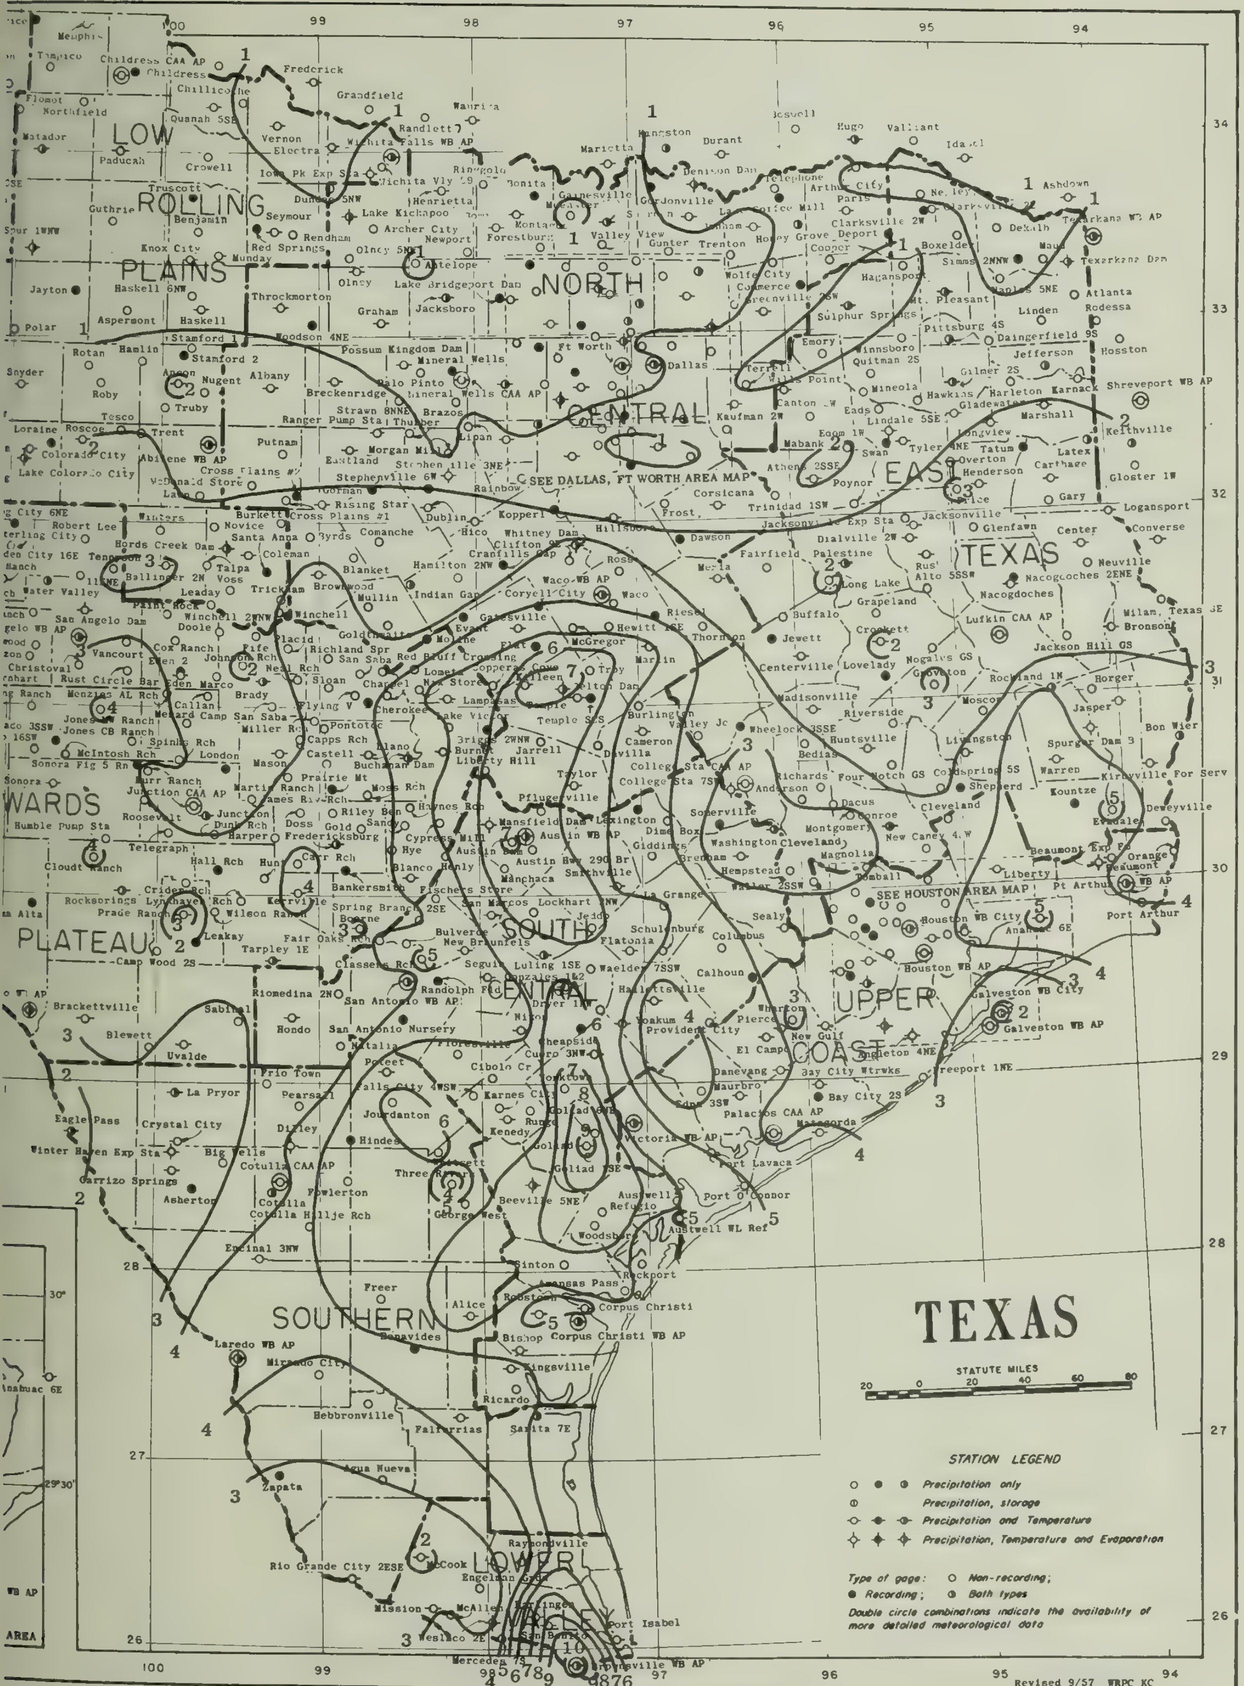
FEBRUARY 1958



Isolines are drawn through points of approximately equal values. Hourly precipitation data from recorder substations will be available in the publication "Hourly Precipitation Data".

TOTAL PRECIPITATION

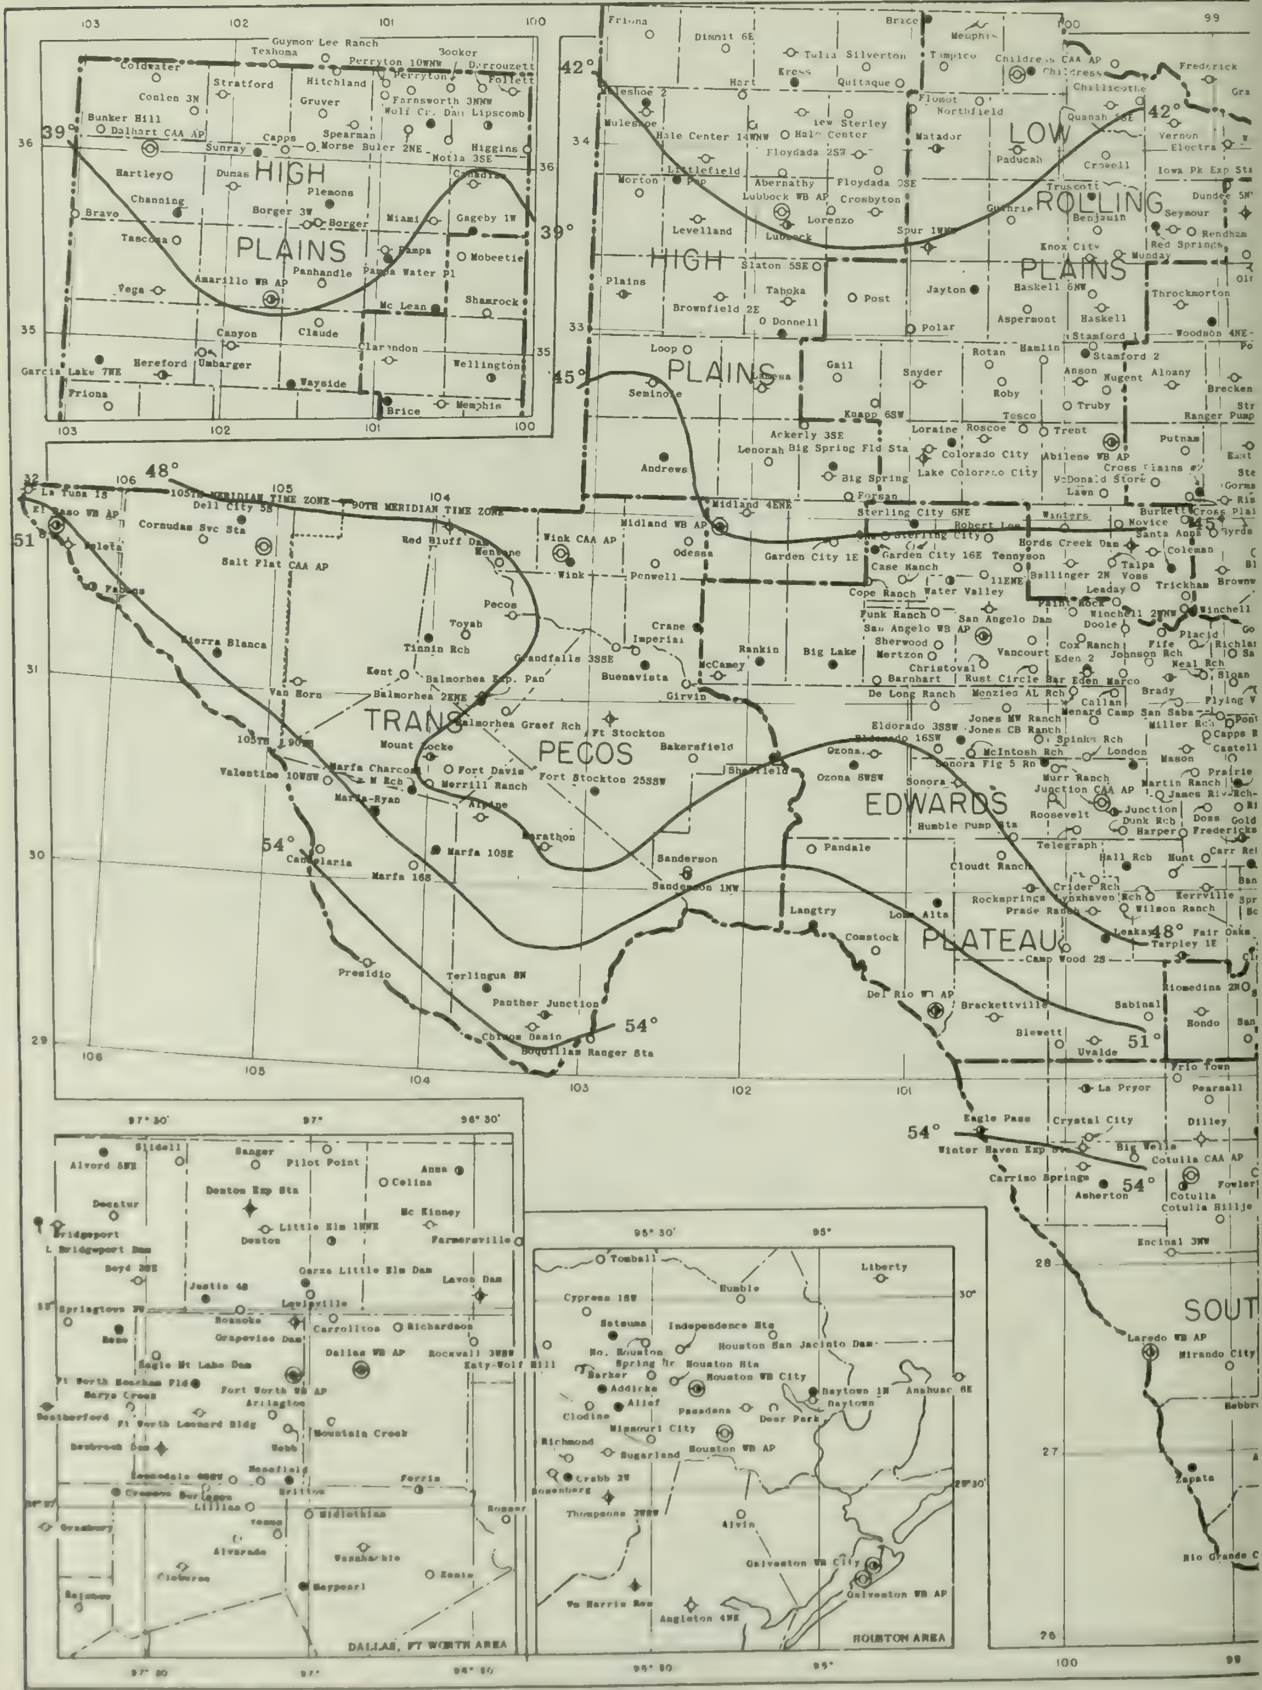
FEBRUARY 1958



Isolines are drawn through points of approximately equal values. Hourly precipitation data from recorder substations will be available in the publication "Hourly Precipitation Data".

AVERAGE TEMPERATURE

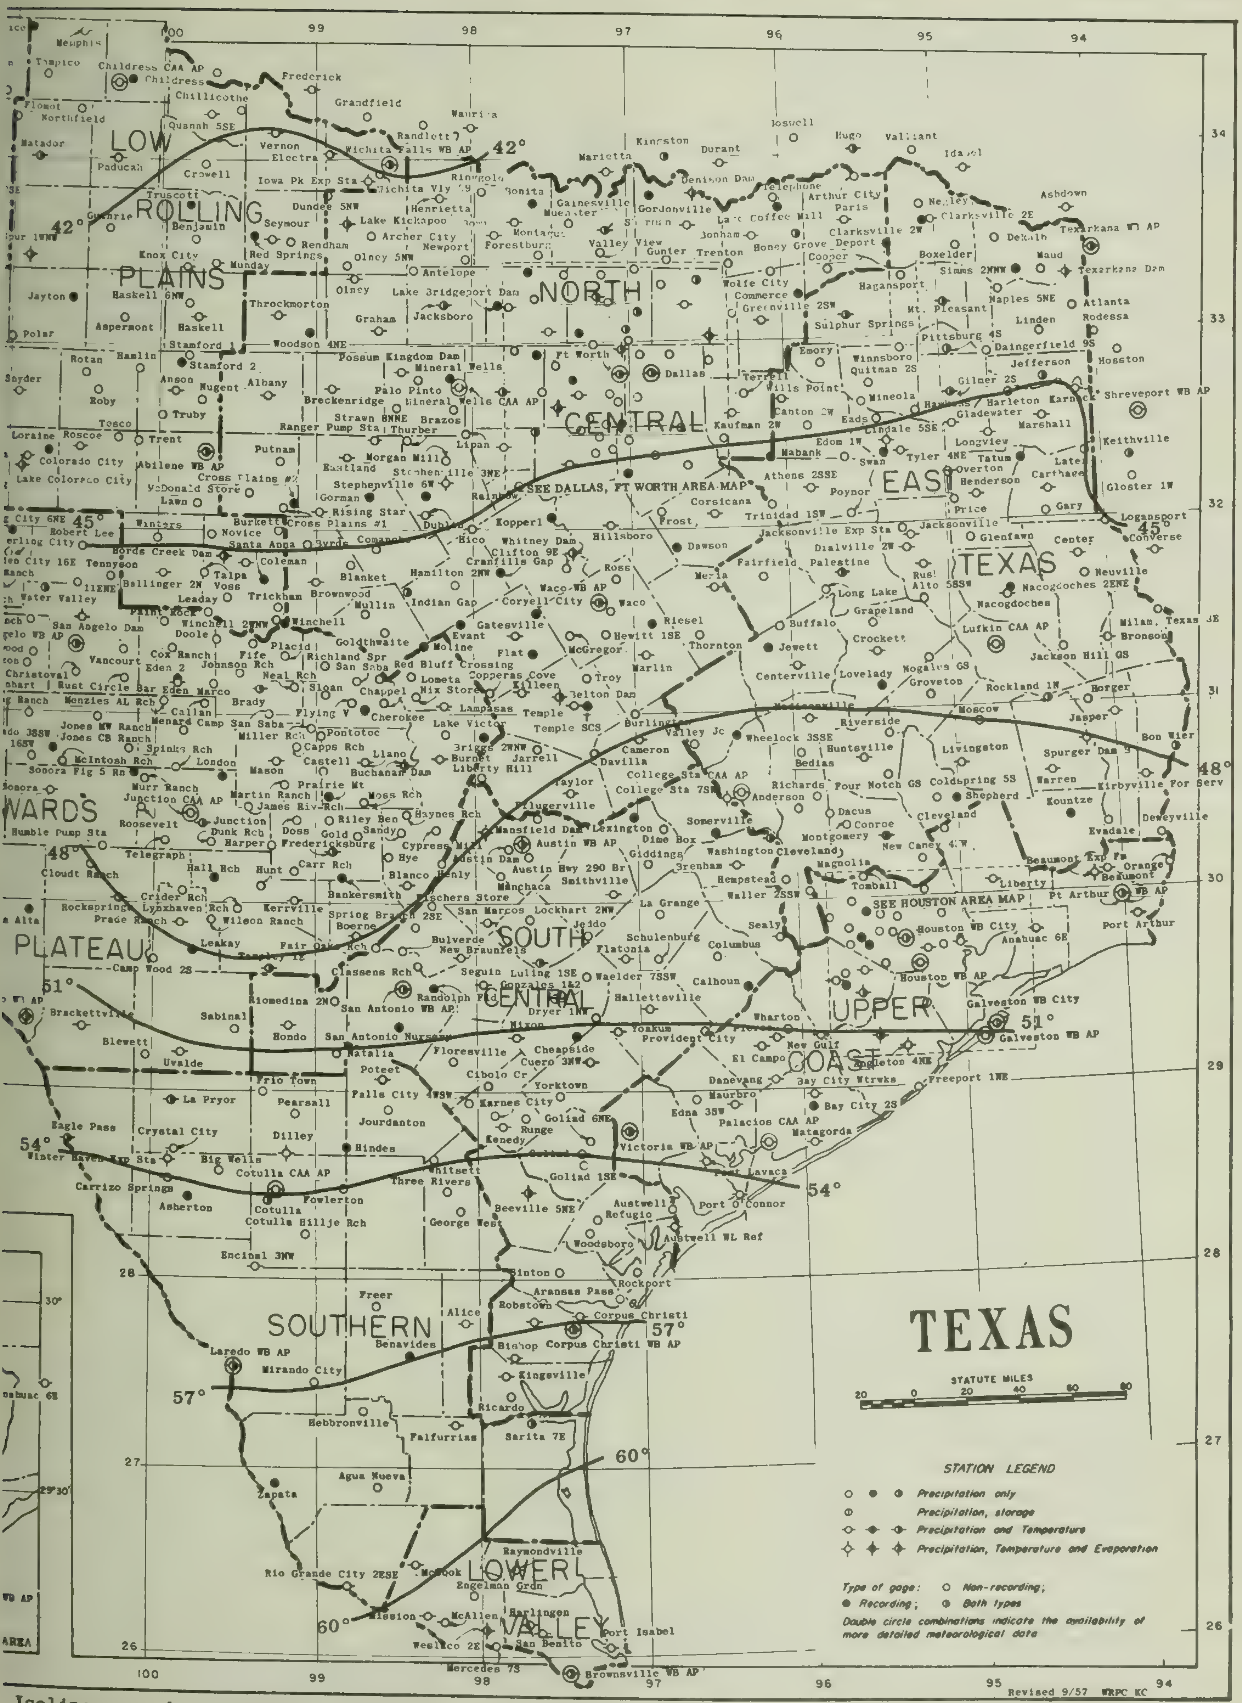
FEBRUARY 1958



Isolines are drawn through points of approximately equal values.

AVERAGE TEMPERATURE

FEBRUARY 1958



Isolines are drawn through points of approximately equal values.

DATA RECEIVED TOO LATE TO BE INCLUDED IN DIVISION MEANS.

Highest Temperature 92 on the 24 at Rio Grande City 2 ESE .

Lowest Temperature 9 on the 13 at Dalhart CAA AP .

Greatest Total Precipitation 7.13 inches at Dallas WB AP .

Least Total Precipitation 0.17 inches at Presidio .

Greatest one-day precipitation 3.04 inches on the 29 at Dallas WB AP .

Greatest Total Snowfall 17.5 inches at Coldwater .

Deepest Snow on Ground 11 inches on the 8 at Coldwater .

See reference notes following Station Index.

A) EVAPORATION MEASURED IN A SUNKEN PAN OF 24-INCH DIAMETER. (C) EVAPORATION MEASURED IN A SCREENED, SUNKEN PAN OF 48-INCH DIAMETER. (F) ALUMINUM (ONE-OURTH INCH THICK) EVAPORATION PAN.

AX AND MIN IN DAILY EVAPORATION TABLE REFER TO EXTREMES OF TEMPERATURE OF WATER IN PAN AS RECORDED DURING THE 24 HOURS ENDING AT TIME OF OBSERVATION.

See reference notes following Station Index.

See reference notes following Station Index.

REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the State Climatologist at Weather Bureau Airport Station, 1710 Wilshire Blvd, Austin 2, Texas, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table and on the maps, became effective with data for October 1956.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921-1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the seasonal snowfall table include snow and sleet. Entries of snow on ground include snow, sleet and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and CAA Stations. For those stations snow on ground values are at 0600 C.S.T.

In the Station Index the letters C, H, and J in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C	Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes and are published later in "Hourly Precipitation Data" Bulletin.
H	"Snowfall and Snow on Ground" Table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
J	"Supplemental Data" Table.

Other Reference Notes

	No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.
	Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.
-	No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.
+	And also on an earlier date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
AM	Data based on observational day ending before noon.
B	Adjusted to a full month.
D	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
SS	This entry in time of observation column in Station Index means observation made near sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.

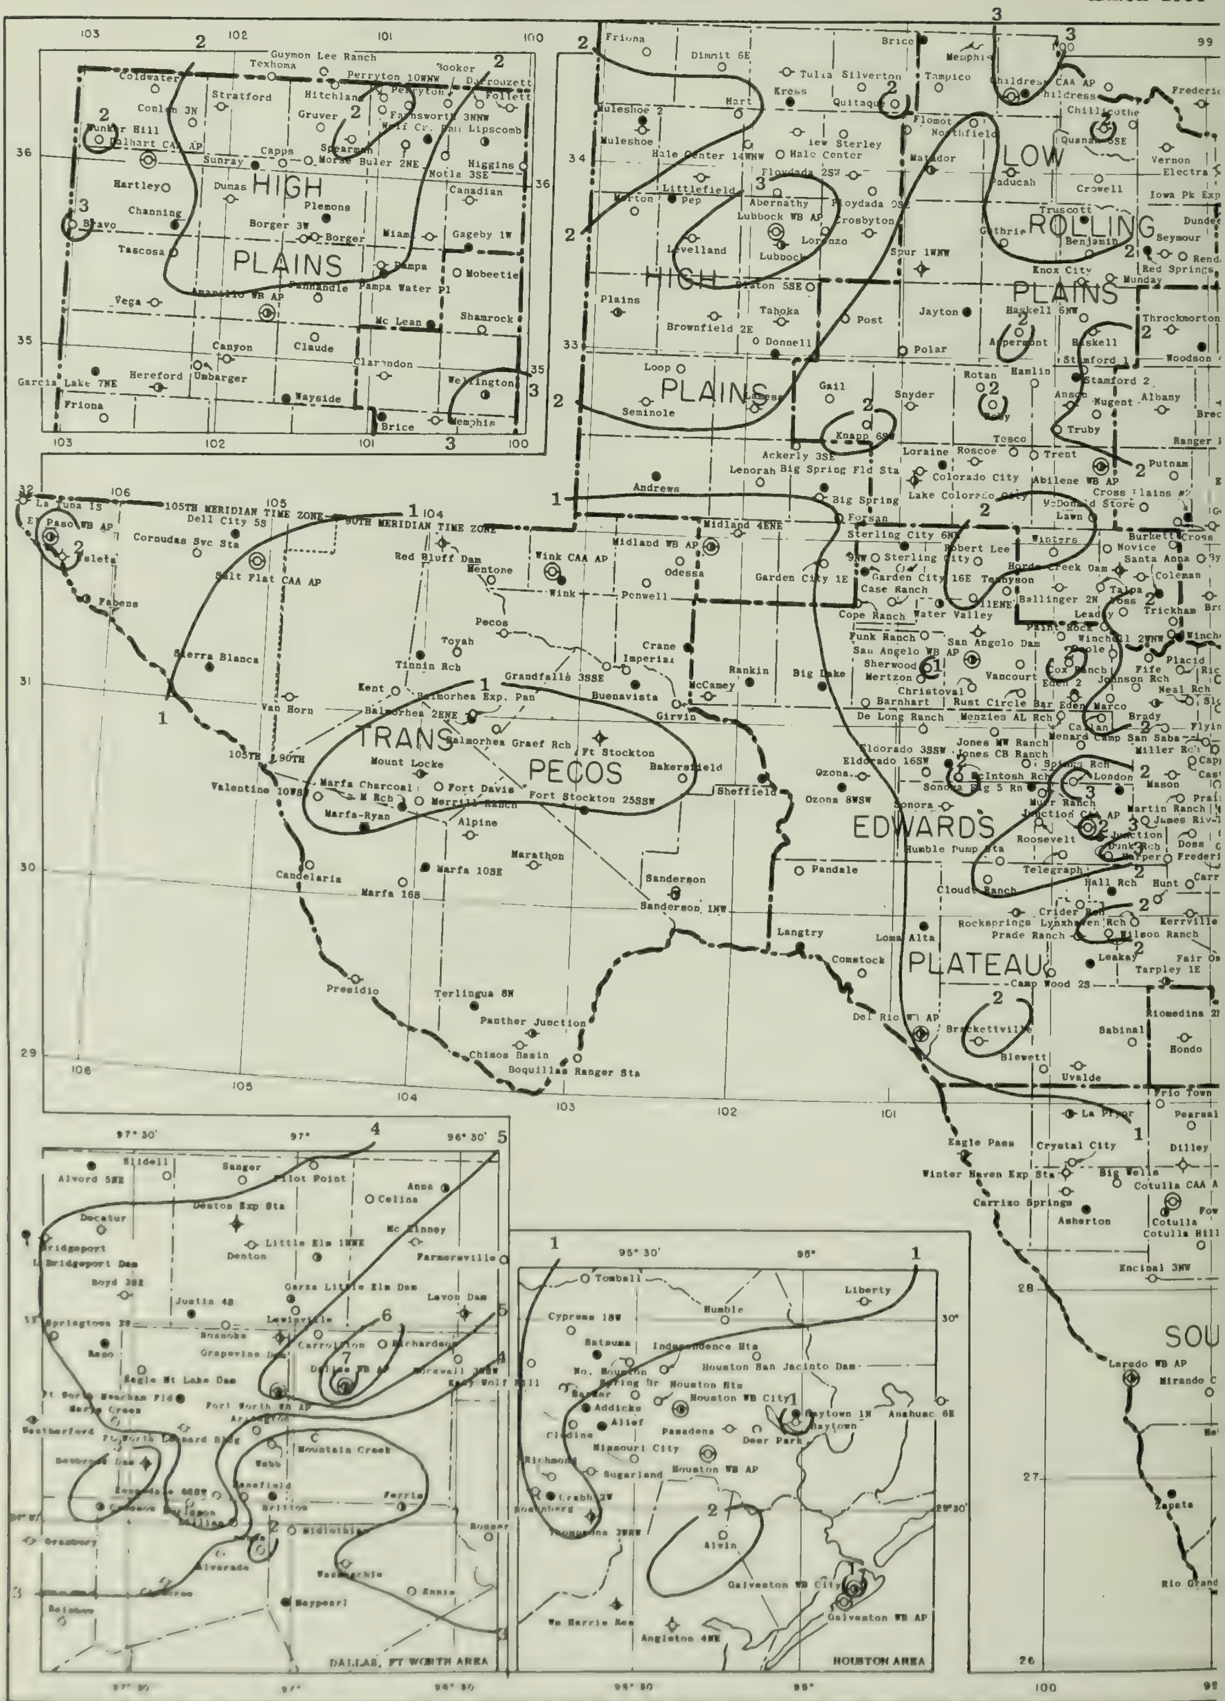
Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation History" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data Annual, obtained as indicated above, price 15 cents.

USCOMM-WB-Asheville -- 5-6-58 -- 1625

TOTAL PRECIPITATION

MARCH 1958



Isolines are drawn through points of approximately equal values. Hourly precipitation data from recorder substations will be available in the publication "Hourly Precipitation Data".

DATA RECEIVED TOO LATE TO BE INCLUDED IN DIVISION MEANS.

Highest Temperature 111 on the 24 at Rio Grande City 2 ESE.

Lowest Temperature 27 on the 8 at Stratford .

Greatest Total Precipitation 17.59 inches at Daingerfield 9 S .

Least Total Precipitation 0.00 inches at 4 stations .

Greatest one-day precipitation 8.11 inches on the 27 at Pittsburg 4 S .

Greatest Total Snowfall 4.0 inches at Dalhart CAA AP .

(A) EVAPORATION MEASURED IN A SUNKEN PAN OF 24-INCH DIAMETER. (C) EVAPORATION MEASURED IN A SCREENED, SUNKEN PAN OF 48-INCH DIAMETER. (F) ALUMINUM (ONE-FOURTH INCH THICK) EVAPORATION PAN.

MAX AND MIN IN DAILY EVAPORATION TABLE REFER TO EXTREMES OF TEMPERATURE OF WATER IN PAN AS RECORDED DURING THE 24 HOURS ENDING AT TIME OF OBSERVATION.

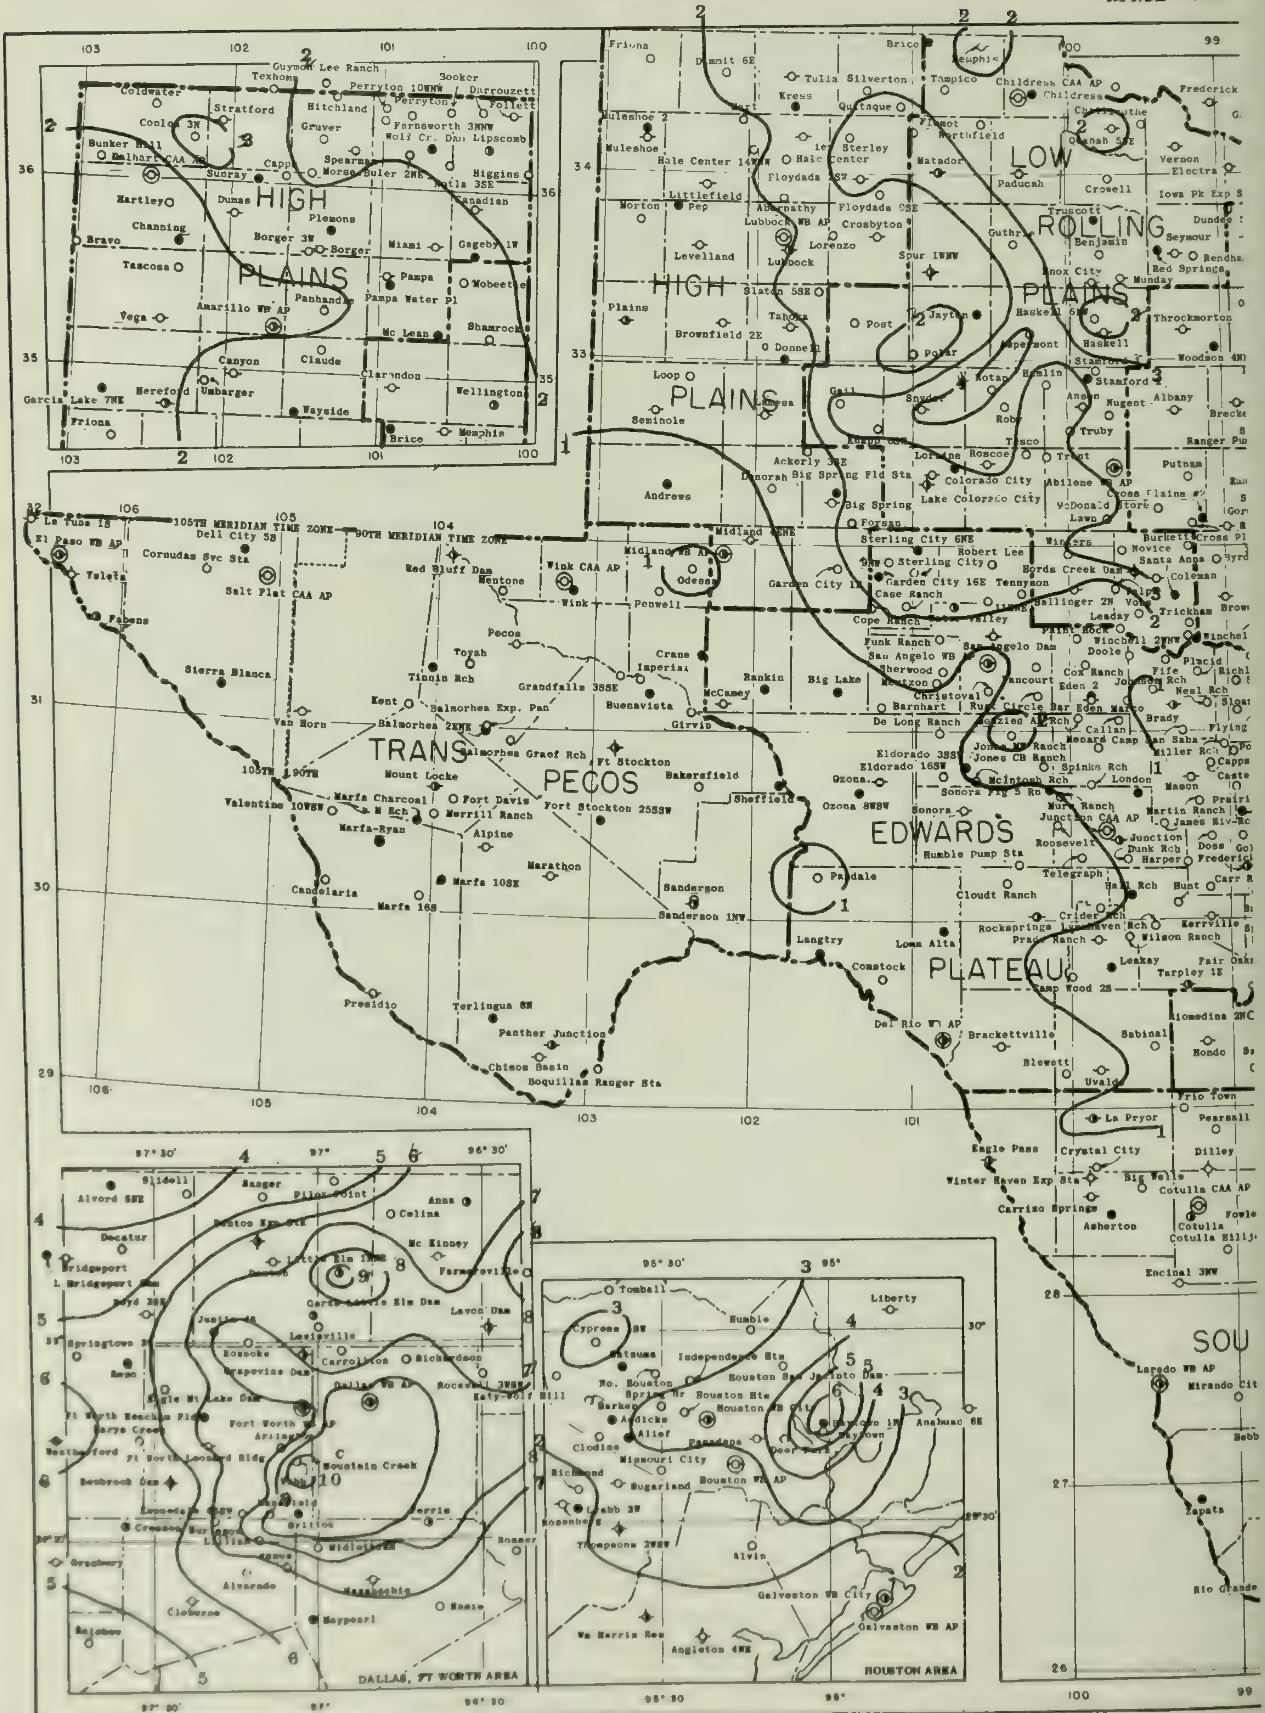
TOTAL PRECIPITATION

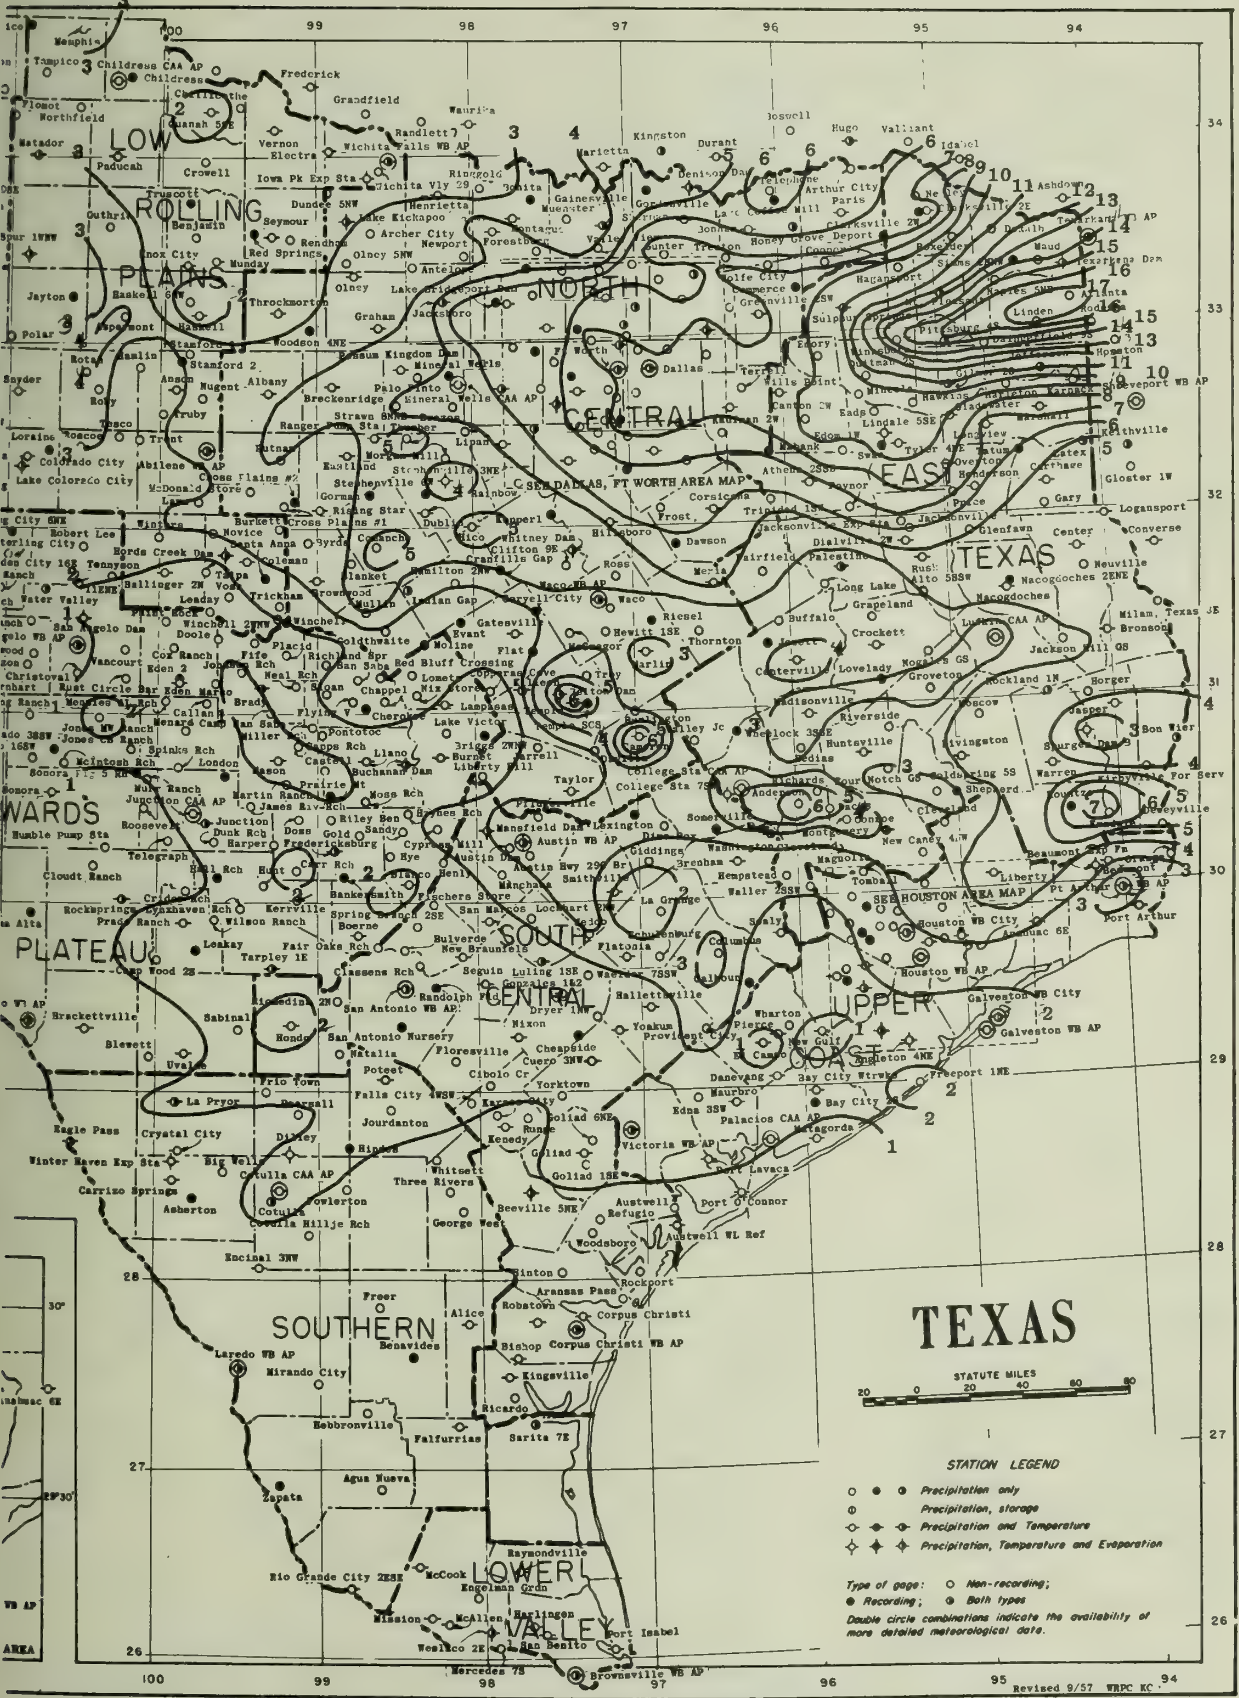
APRIL 1958



Isolines are drawn through points of approximately equal values. Hourly precipitation data from recorder substations will be available in the publication "Hourly Precipitation Data".

TOTAL PRECIPITATION

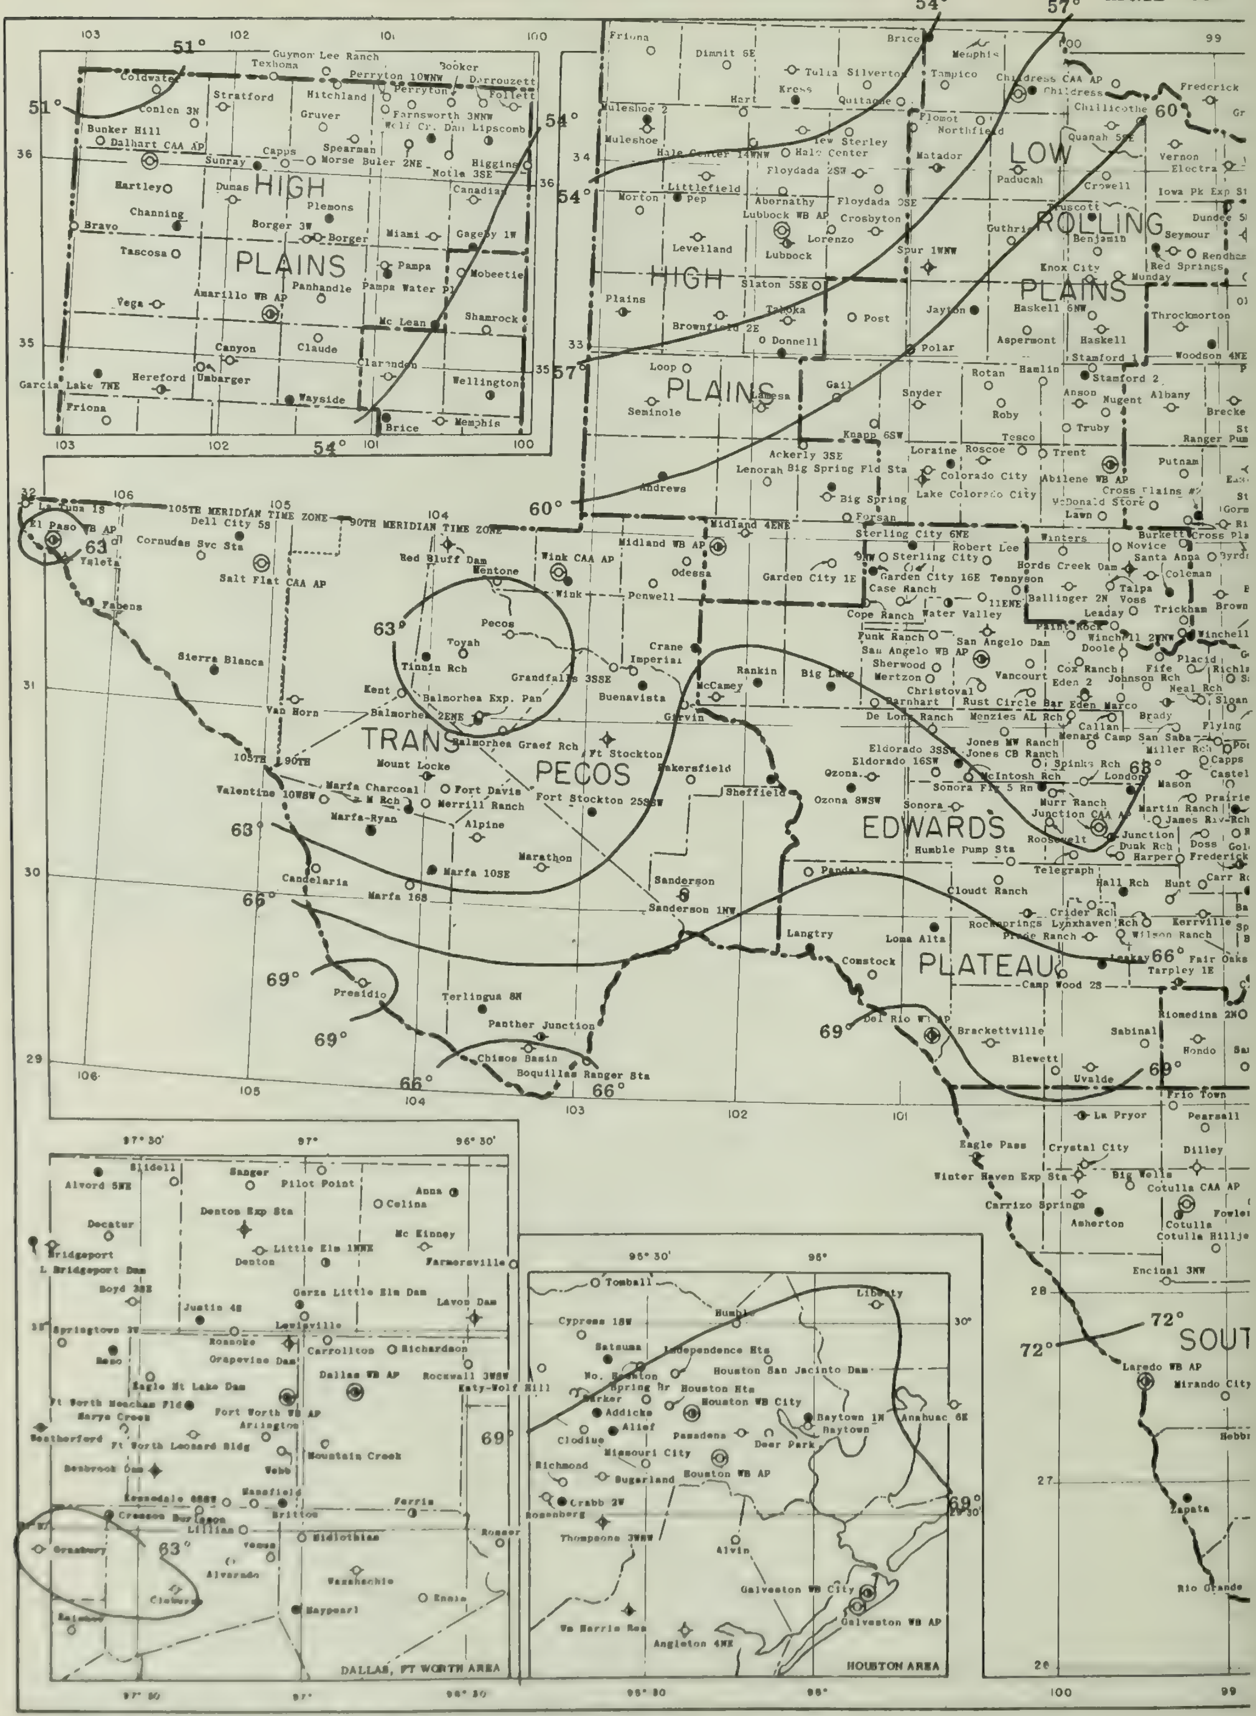
APRIL 1958



Isolines are drawn through points of approximately equal values. Hourly precipitation data from recorder substations will be available in the publication "Hourly Precipitation Data".

AVERAGE TEMPERATURE

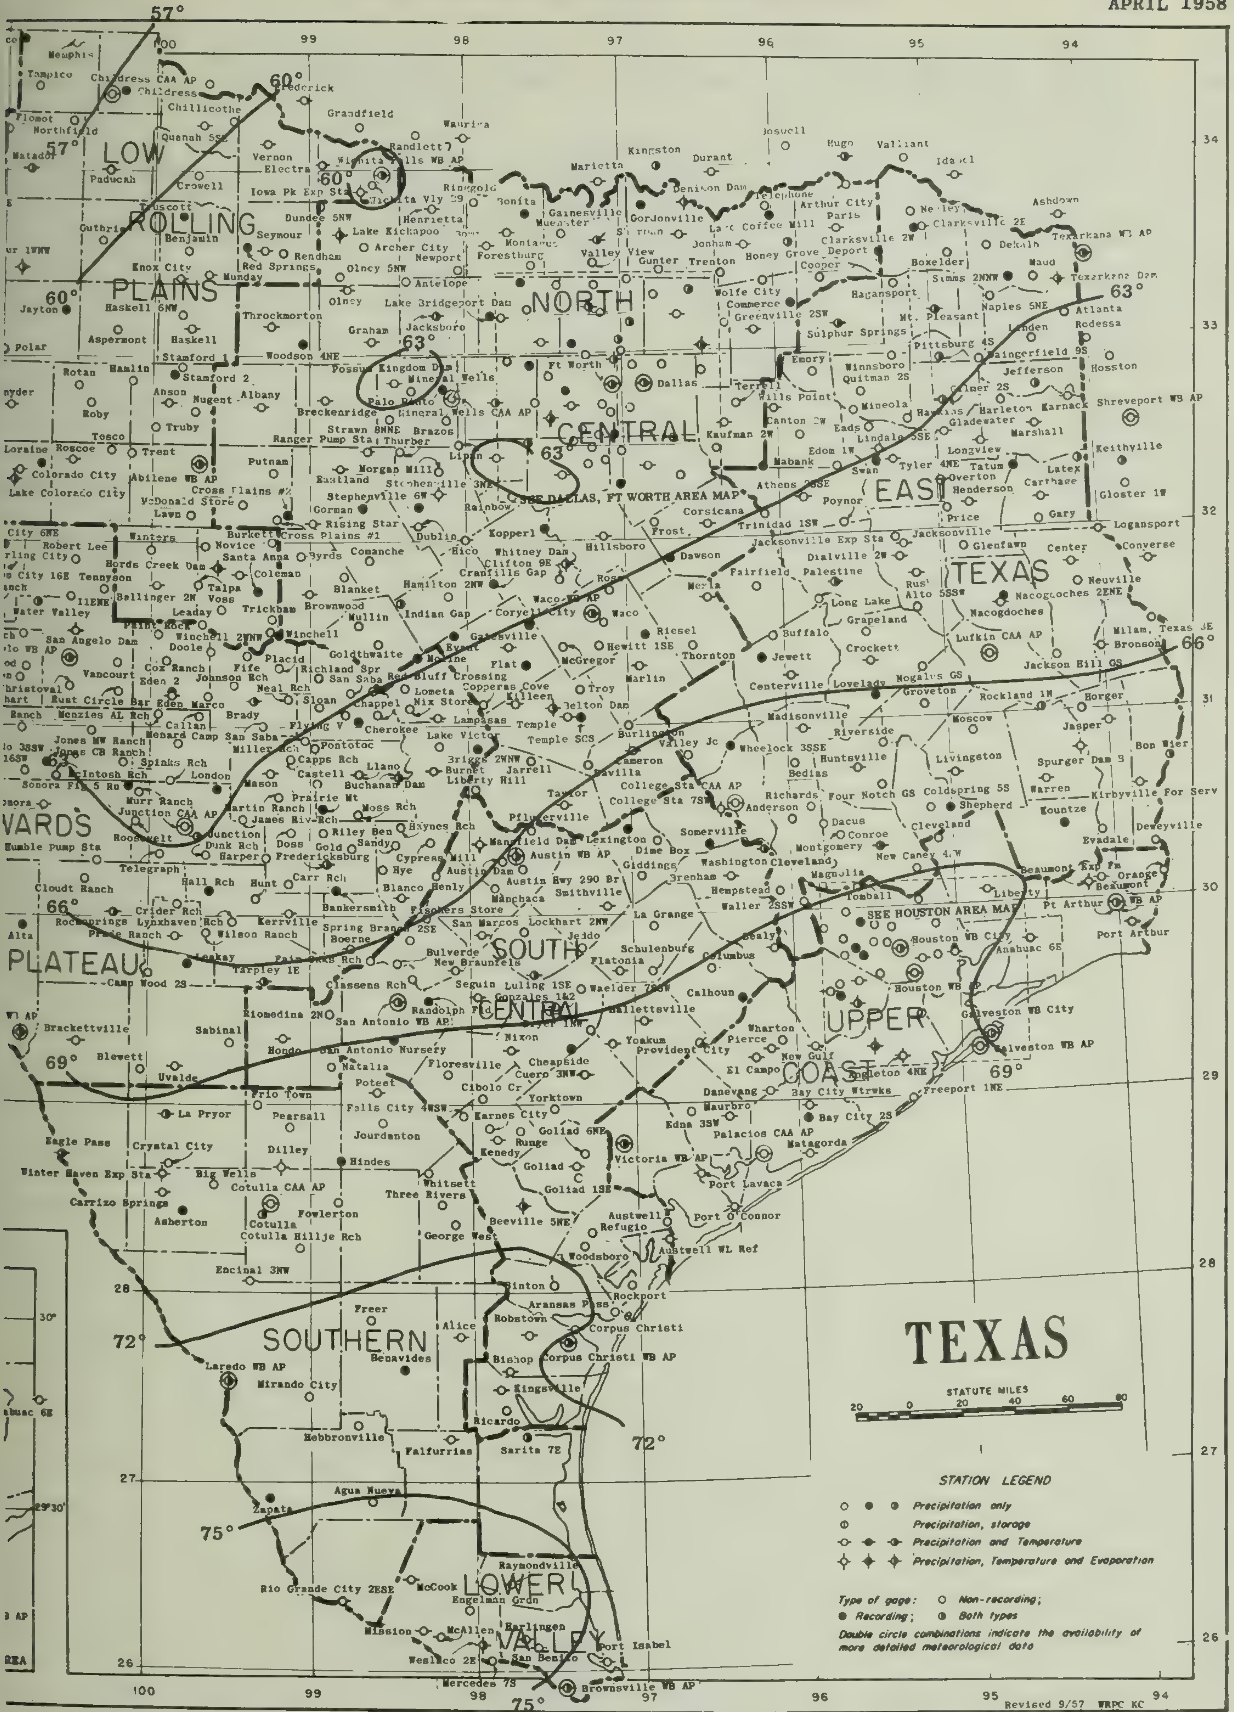
APRIL 1958



Isolines are drawn through points of approximately equal values.

AVERAGE TEMPERATURE

APRIL 1958



Isolines are drawn through points of approximately equal values.

REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the State Climatologist at Weather Bureau Airport Station, 1710 Wilshire Blvd, Austin 2, Texas, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table and on the maps, became effective with data for October 1956.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921-1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the seasonal snowfall table include snow and sleet. Entries of snow on ground include snow, sleet and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and CAA Stations. For those stations snow on ground values are at 0600 C.S.T.

In the Station Index the letters C, H, and J in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes and are published later in "Hourly Precipitation Data" Bulletin.
H "Snowfall and Snow on Ground" Table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
J "Supplemental Data" Table.

Other Reference Notes

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.
Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.
- No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.
+ And also on an earlier date or dates.
* Amount included in following measurement, time distribution unknown.
# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
// Gage is equipped with a windshield.
AR This entry in time of observation column in Station Index means after rain.
AM Data based on observational day ending before noon.
B Adjusted to a full month.
D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
SS This entry in time of observation column in Station Index means observation made near sunset.
T Trace, an amount too small to measure.
V Includes total for previous month.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents. Government Printing Office, Washington 25, D. C.

nformation concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation History" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. Simiar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data Annual, obtained as indicated above, price 5 cents.

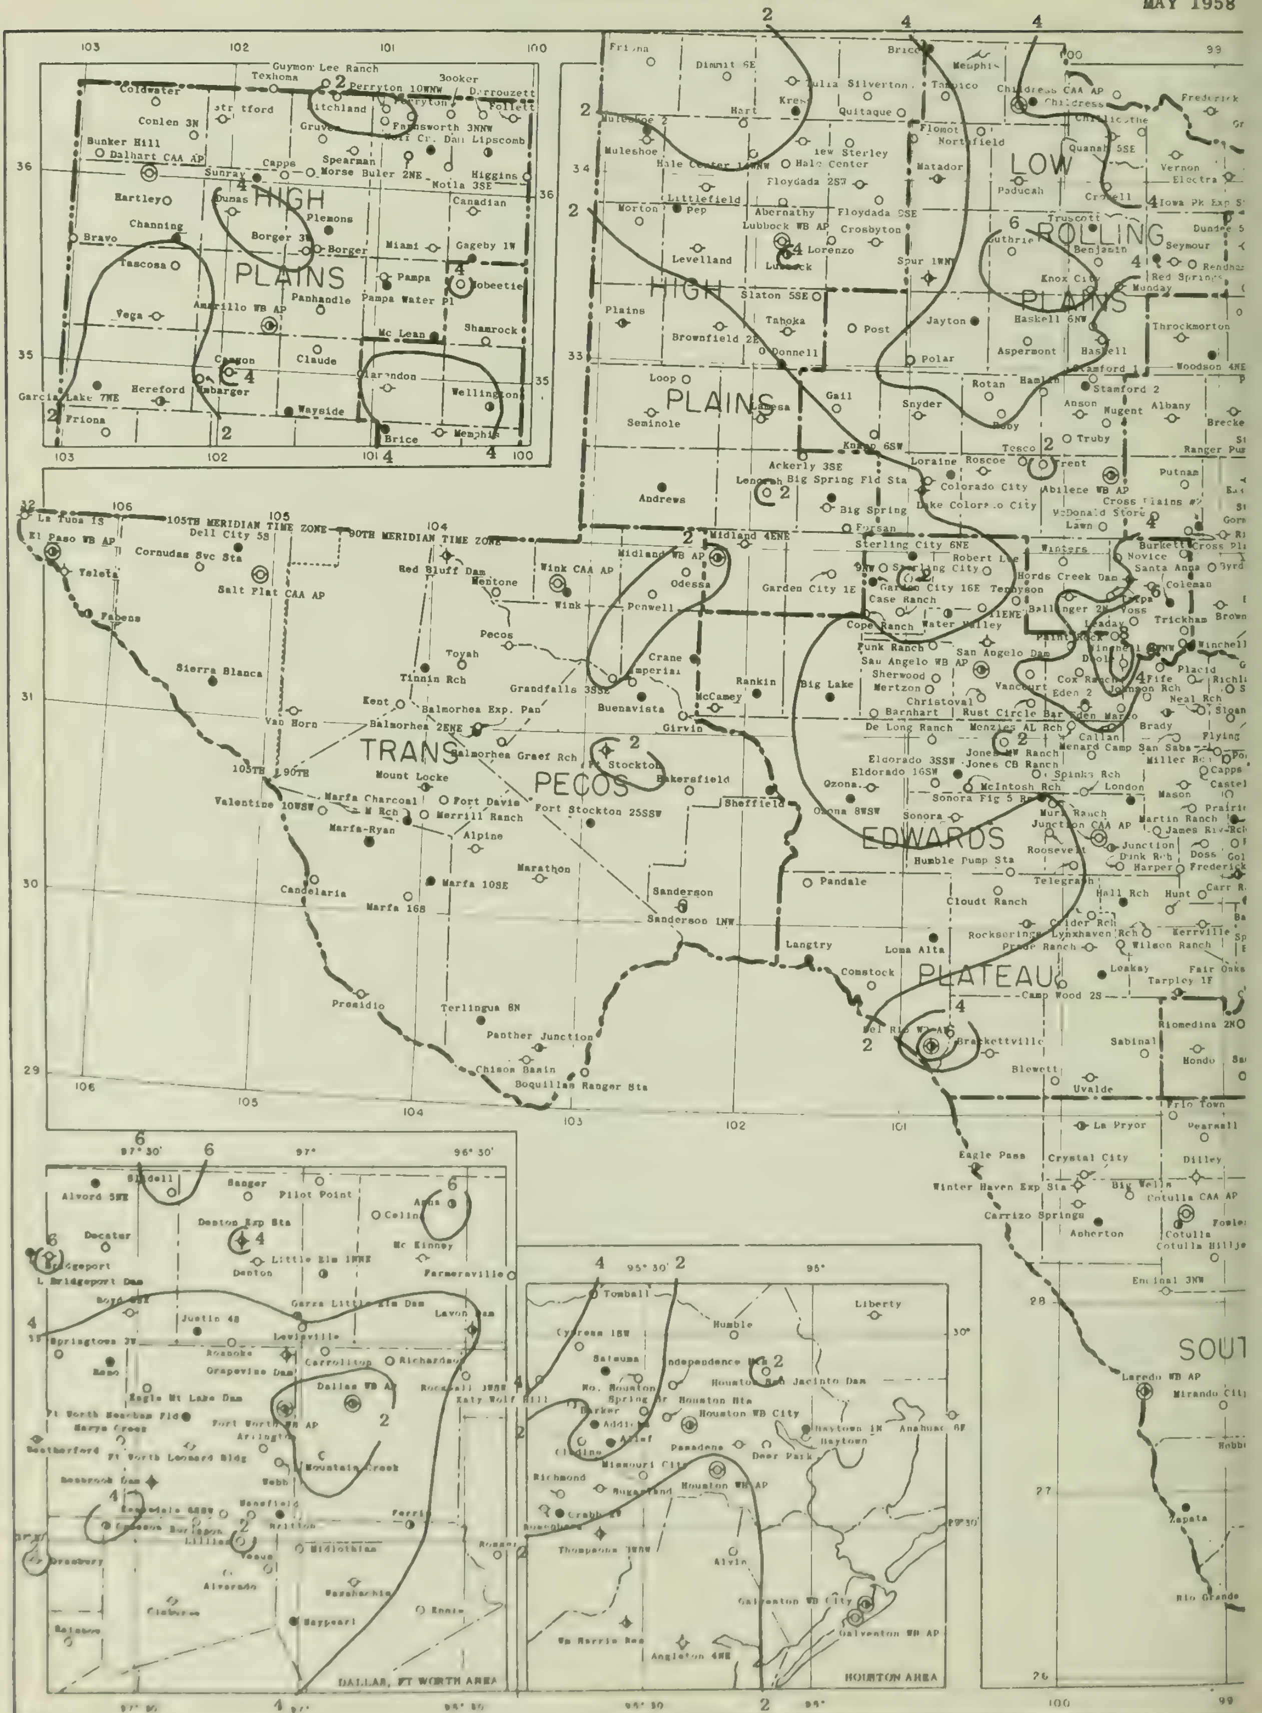
EVAPORATION MEASURED IN A SUNKEN PAN OF 24-INCH DIAMETER. (C) EVAPORATION MEASURED IN A SCREENED, SUNKEN PAN OF 48-INCH DIAMETER. (F) ALUMINUM (ONE-
TH INCH THICK) EVAPORATION PAN.
AND MIN IN DAILY EVAPORATION TABLE REFER TO EXTREMES OF TEMPERATURE OF WATER IN PAN AS RECORDED DURING THE 24 HOURS ENDING AT TIME OF OBSERVATION.

TOTAL PRECIPITATION



Isolines are drawn through points of approximately equal values. Hourly precipitation data from recorder substations will be available in the publication "Hourly Precipitation Data".

TOTAL PRECIPITATION

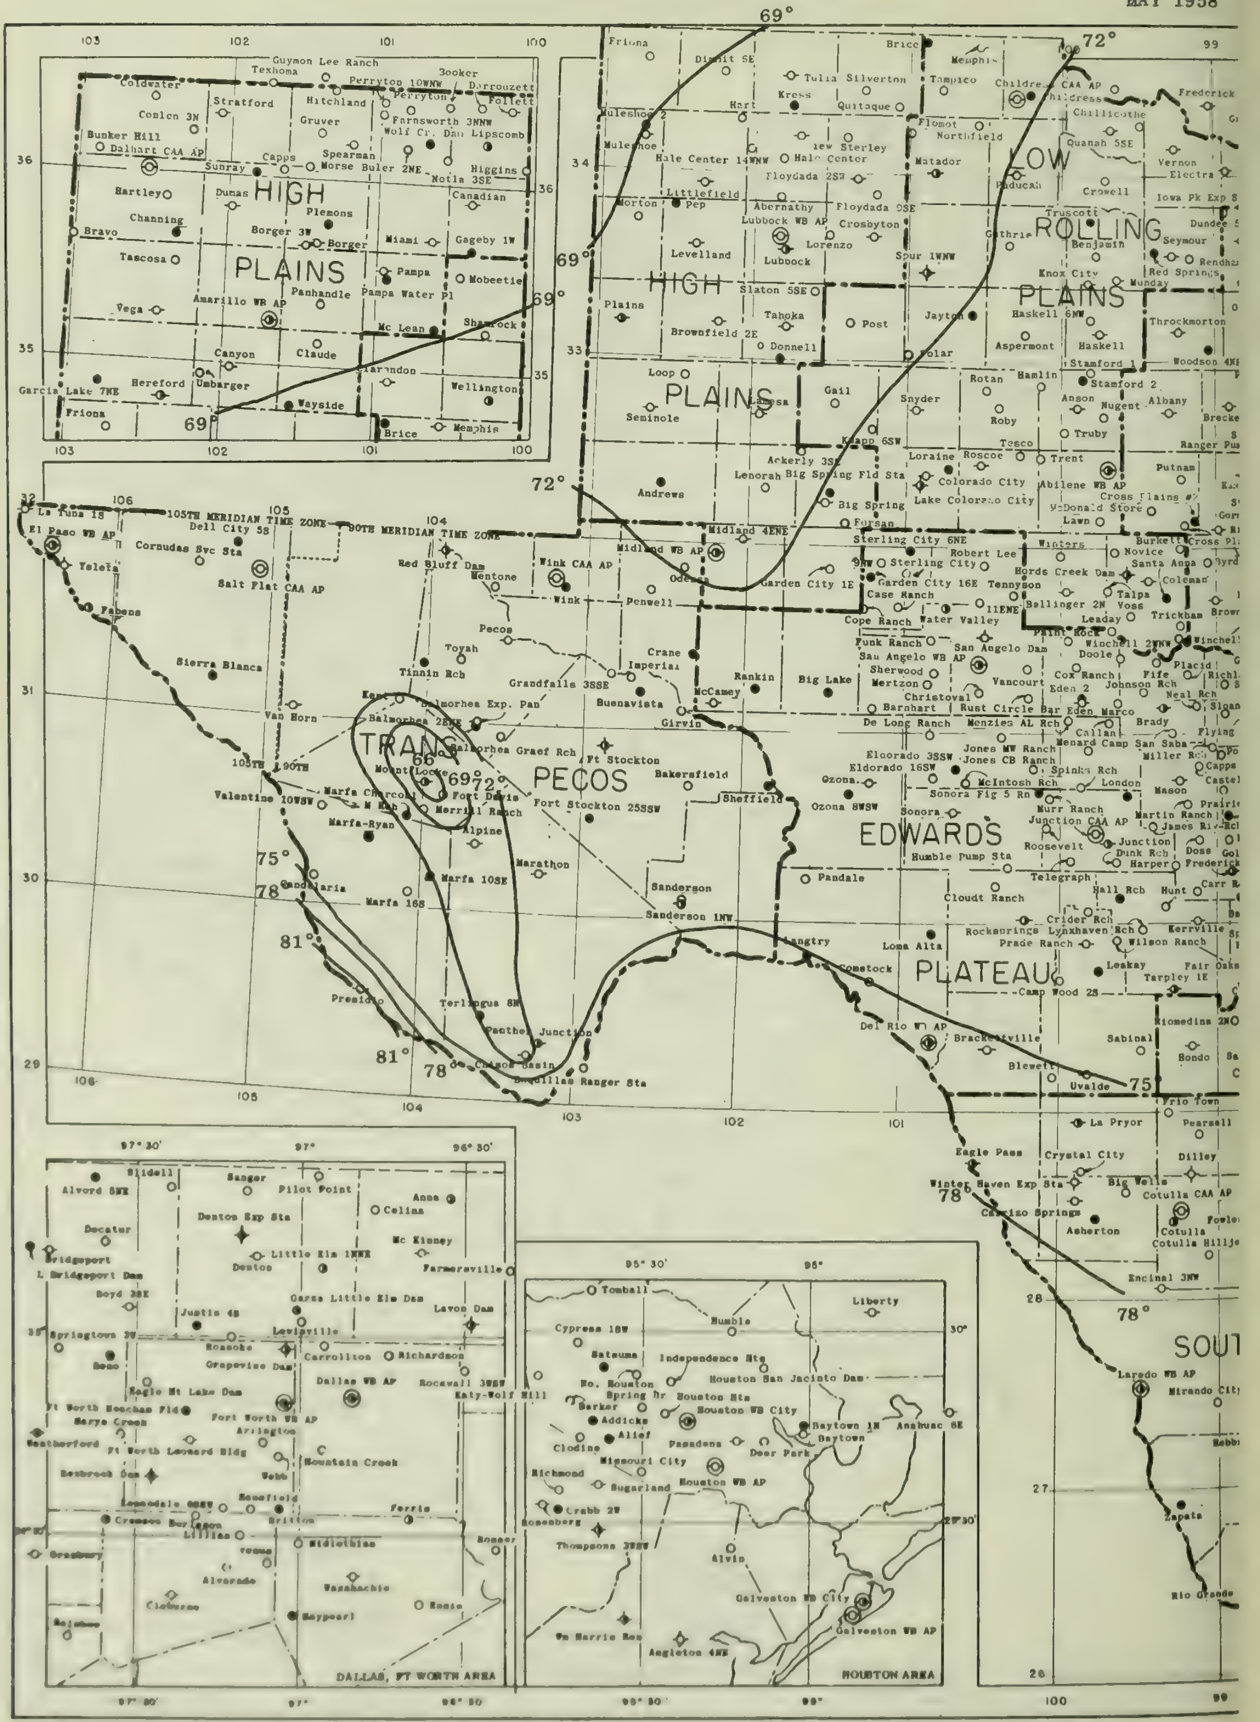
STATION LEGEND
○ ● ◐ Precipitation only
Precipitation, storage
Precipitation and Temperature
Precipitation, Temperature and Evaporation
Type of gage: ○ Non-recording; ● Recording; ◐ Both types.
Double circle combinations indicate the availability of more detailed meteorological data.
Revised 9/57 WBPC KC

Isolines are drawn through points of approximately equal values. Hourly precipitation data from recorder substations will be available in the publication "Hourly Precipitation Data".

AVERAGE TEMPERATURE

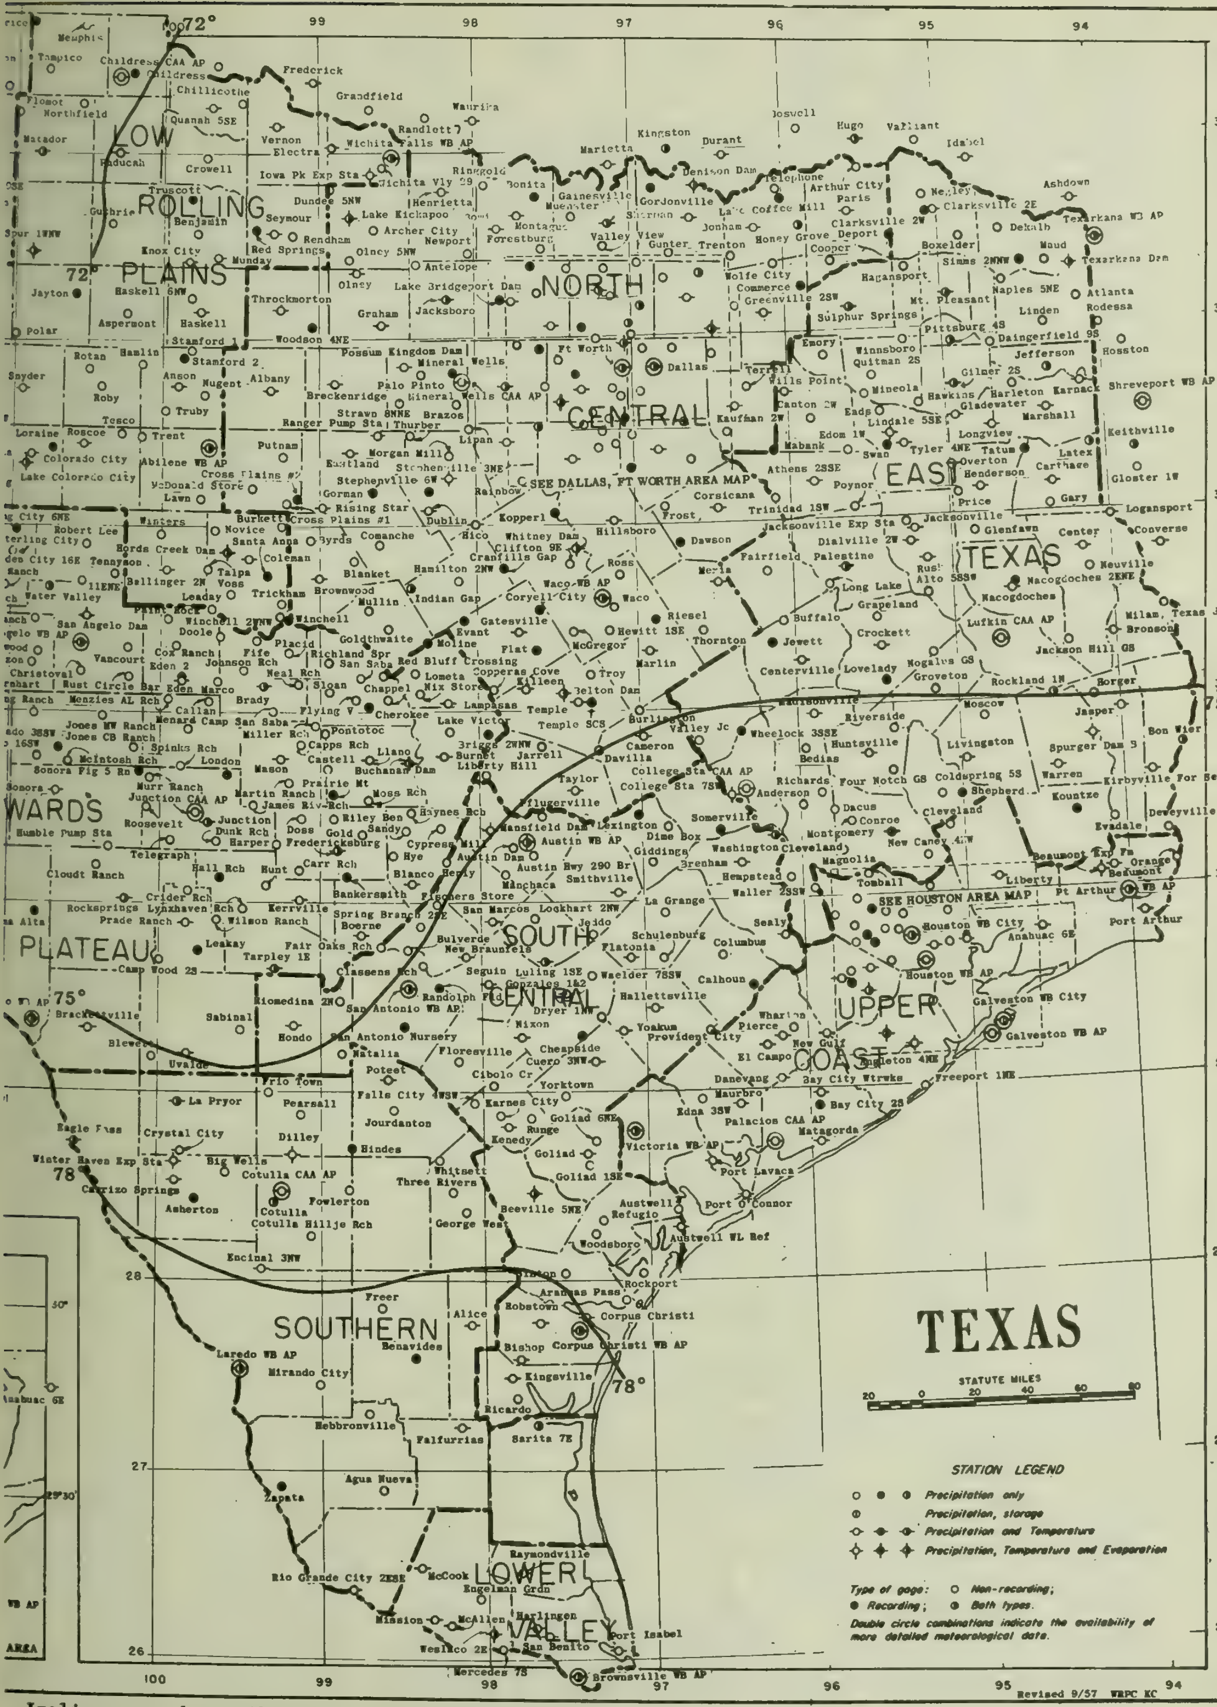
MAY 1958



Isolines are drawn through points of approximately equal values.

AVERAGE TEMPERATURE

MAY 1958



Isolines are drawn through points of approximately equal values.

REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the State Climatologist at Weather Bureau Airport Station, 1710 Wilshire Blvd, Austin 2, Texas, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table and on the maps, became effective with data for October 1956.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

ong-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921-1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the seasonal snowfall table include snow and sleet. Entries of snow on ground include snow, sleet and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and CAA Stations. For those stations snow on ground values are at 0600 C.S.T.

n the Station Index the letters C, H, and J in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C	Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes and are published later in "Hourly Precipitation Data" Bulletin.
H	"Snowfall and Snow on Ground" Table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
J	"Supplemental Data" Table.

Other Reference Notes

	No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.
	Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.
-	No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.
+	And also on an earlier date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
AM	Data based on observational day ending before noon.
B	Adjusted to a full month.
D	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
SS	This entry in time of observation column in Station Index means observation made near sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.

ubscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should e made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, overnment Printing Office, Washington 25, D. C.

nformation concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation istory" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data Annual, obtained as indicated above, price 5 cents.

JUNE 1958
Volume LXIII No. 6

ASHEVILLE: 1958

TEXAS - JUNE 1958

WEATHER SUMMARY

June brought a great variety of weather. During the first half of the month peratures were slightly above normal. Rainfall was light in widely scat thunderstorms.

On the 15th Alma, the season's first tropical storm, moved inland just sou Brownsville. Almost immediately it lost its identity without doing any app able damage or producing much rain. From the 16th through the 18th the deep, surge of tropical air brought northward with the dying tropical storm trig torrential rains in the Edwards Plateau, and parts of south and east Texas. iest rains fell in the counties of Maverick, Real, Bandera, Medina, Uvalde, Ed and Kinney. Most amounts were from 6 to 10 inches, with some unofficial amount 16 to 20 inches. Flash flooding occurred along all the creeks and rivers that in the Edwards Plateau Escarpment.

Early on the 19th several tornadoes occurred in the Panhandle as a cool push o began a southward march across the State. By Sunday the 22d, the cool front penetrated to the coast. It became stationary along the coast after setting torrential local rains in the Brownsville-Lampasas area. It brought welcome lief from the summer heat.

Typical summer weather returned on the 23d. This weather pattern was abru interrupted as an unusually strong "norther" entered the Panhandle on the 2 By the evening of the 27th it had stalled in the Gulf of Mexico south of Galve and Corpus Christi and extended westward across the Rio Grande Valley just s of Laredo. Record low temperatures for late June were recorded at many point the Panhandle, South Plains and in north central Texas. This front set off h rains in the Lower Rio Grande Valley on the 27th, amounts ranging up to six in or more.

The month ended with typical summer weather.

R. D. Blood
State Climatologi
U. S. Weather Bur
Austin, Texas

Highest Temperature 115 on the 24 at Presidio.

Lowest Temperature 46 on the 26 at 3 stations.

Greatest Total Precipitation 11.30 inches at Brackettville.

Least Total Precipitation T inches at 2 stations.

Greatest one-day precipitation 8.25 inches on the 17 at Henly

MAX AND MIN IN DAILY EVAPORATION TABLE REFER TO EXTREMES OF TEMPERATURE OF WATER IN PAN AS RECORDED DURING THE 24 HOURS ENDING AT TIME OF OBSERVATION.
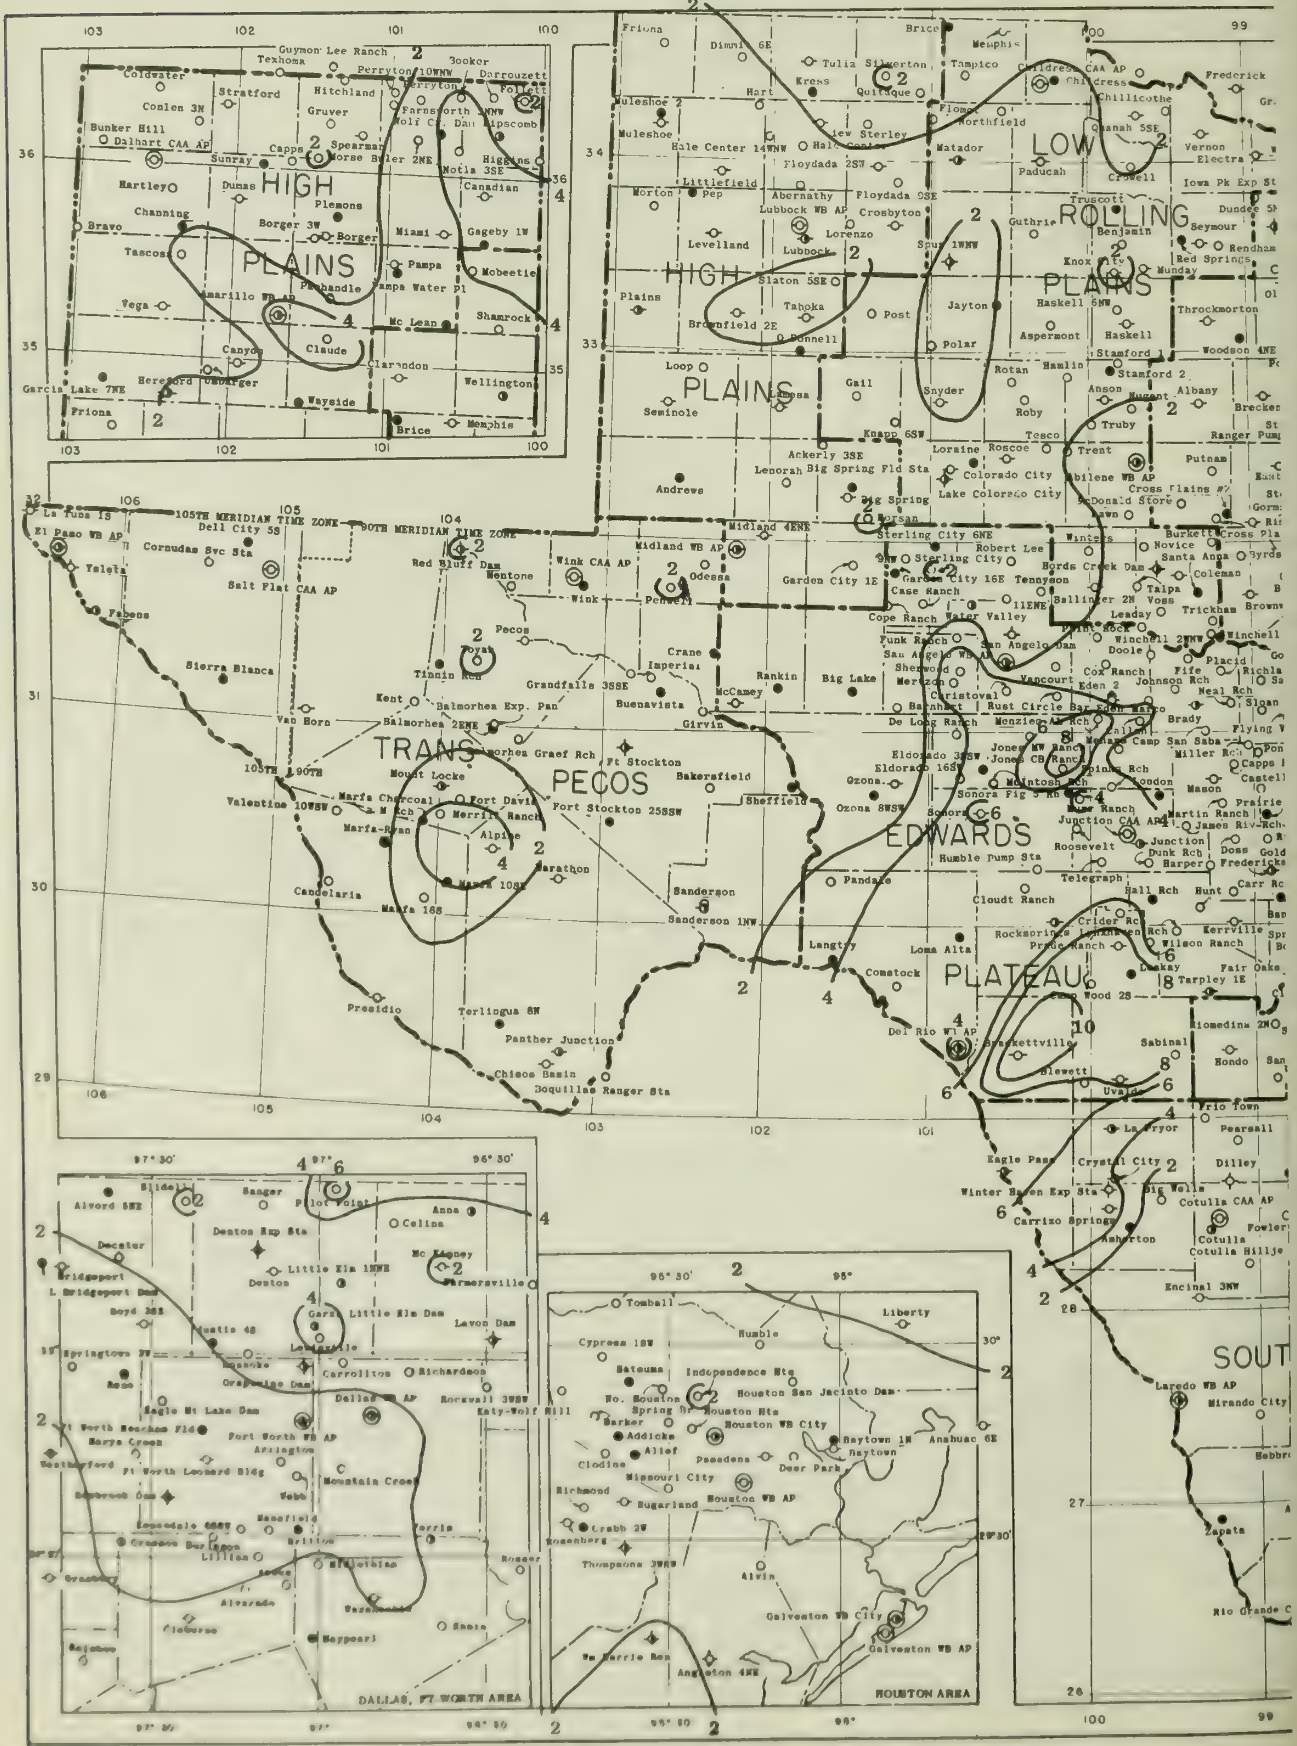
(A) EVAPORATION MEASURED IN A SUNKEN PAN OF 24-INCH DIAMETER. (F) ALUMINUM (ONE-FOURTH INCH THICK) EVAPORATION PAN.

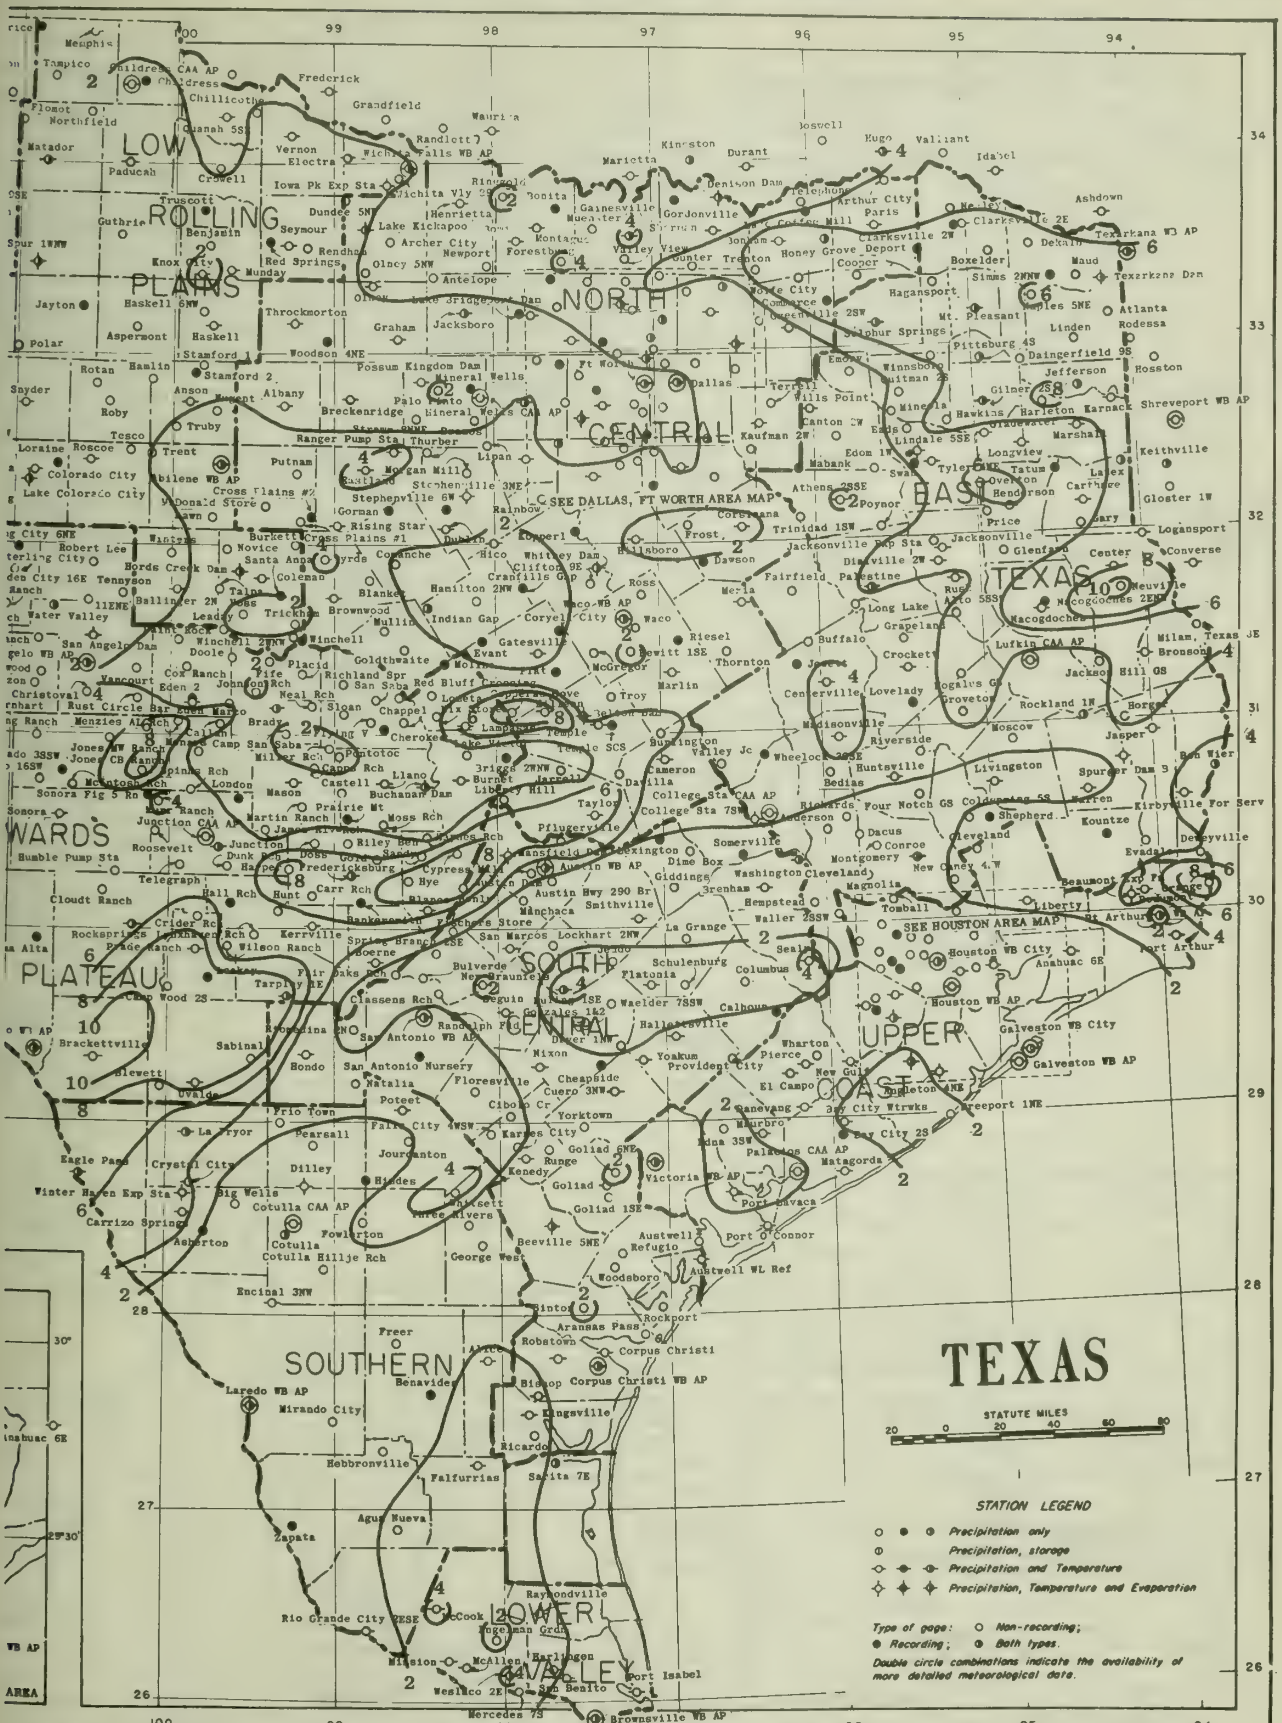
TOTAL PRECIPITATION



Isolines are drawn through points of approximately equal values. Hourly precipitation data from recorder substations will be available in the publication "Hourly Precipitation Data".

TOTAL PRECIPITATION

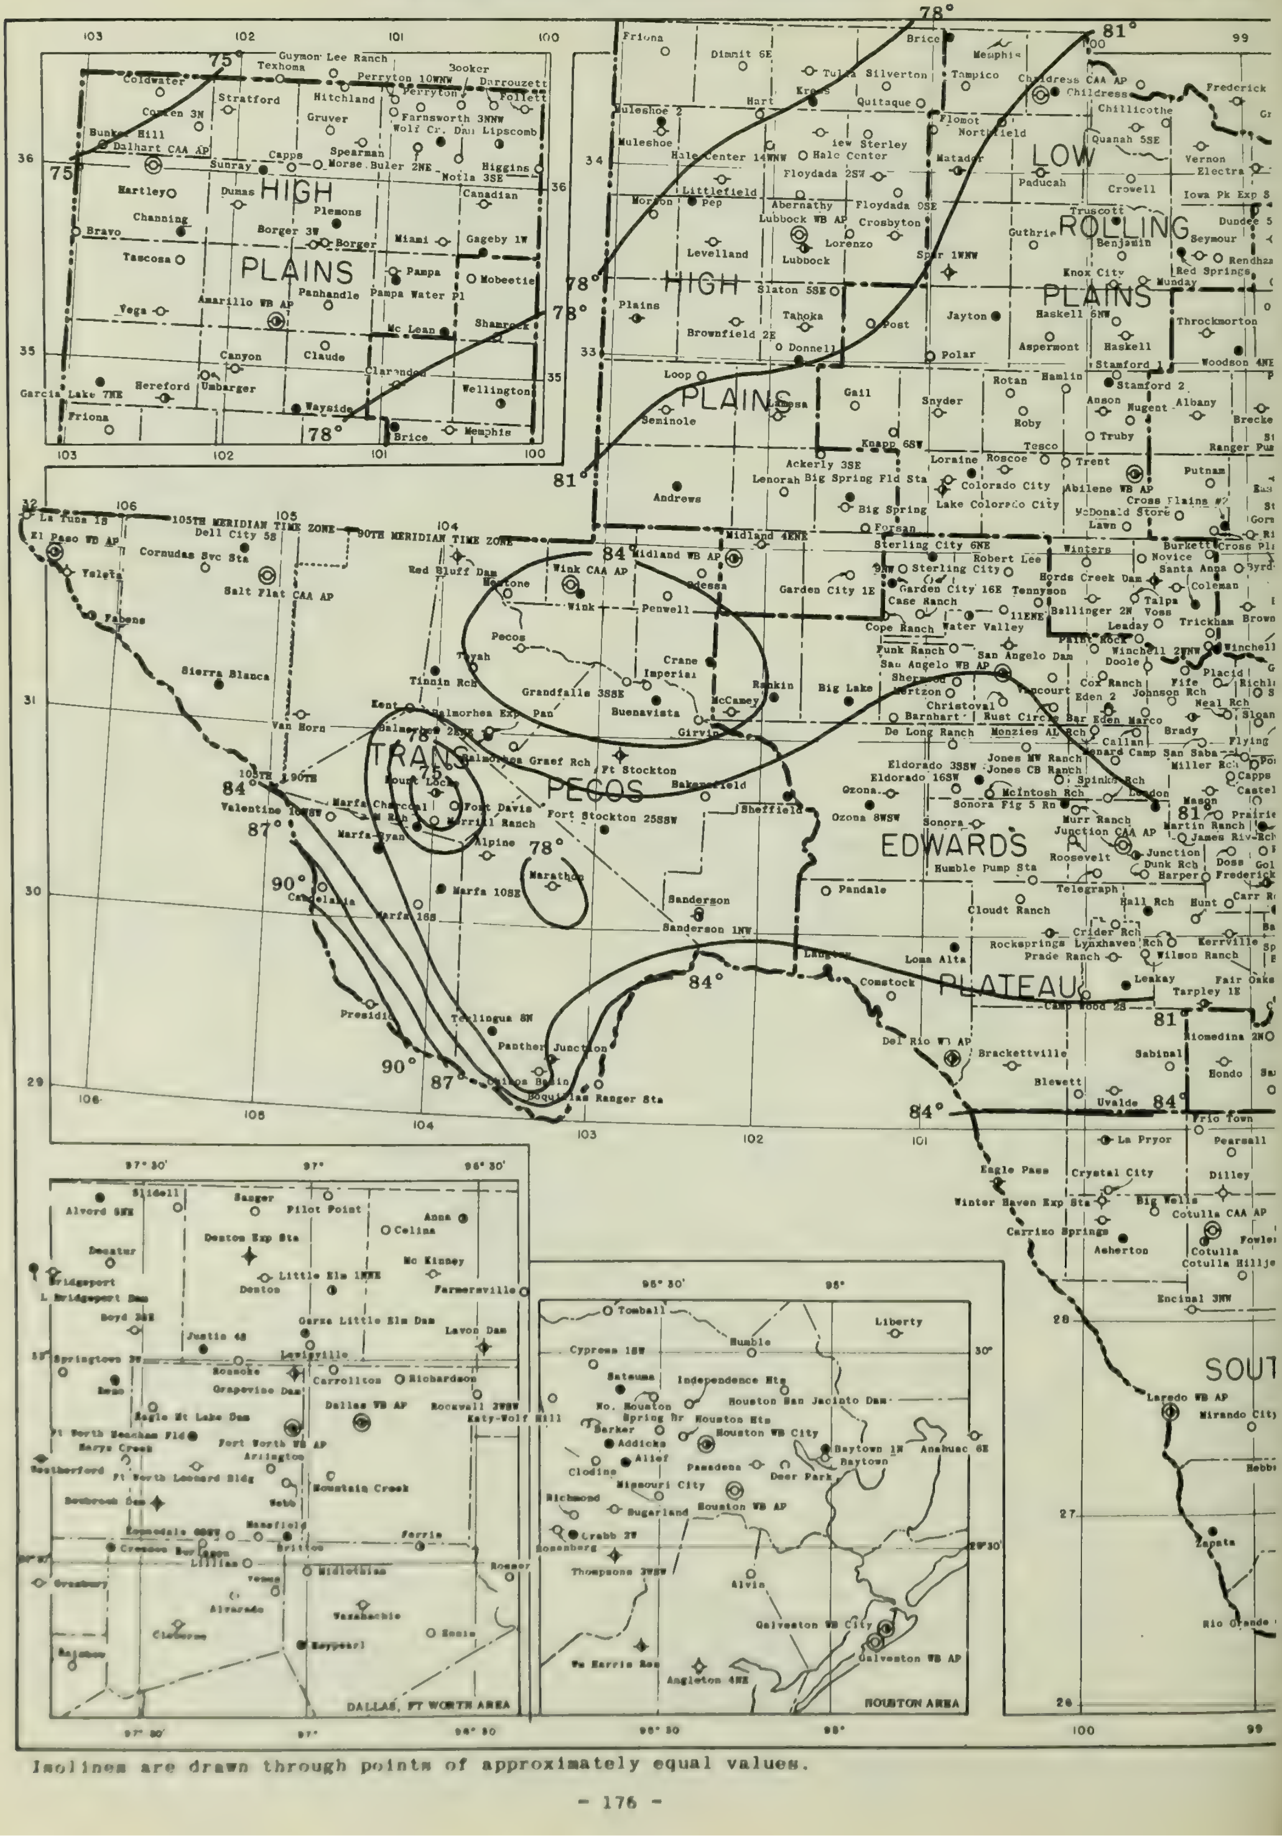
JUNE 1958



Isolines are drawn through points of approximately equal values. Hourly precipitation data from recorder substations will be available in the publication "Hourly Precipitation Data".

AVERAGE TEMPERATURE

JUNE 1958



Isolines are drawn through points of approximately equal values.

AVERAGE TEMPERATURE

JUNE 1958

This issue contains additional precipitation data for the storm of June 15-18 on Page 152

REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the State Climatologist at Weather Bureau Airport Station, 1710 Wilshire Blvd, Austin 2, Texas, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table and on the maps, became effective with data for October 1956.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921-1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the seasonal snowfall table include snow and sleet. Entries of snow on ground include snow, sleet and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and CAA Stations. For those stations snow on ground values are at 0600 C.S.T.

In the Station Index the letters C, H, and J in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C	Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes and are published later in "Hourly Precipitation Data" Bulletin.
H	"Snowfall and Snow on Ground" Table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
J	"Supplemental Data" Table.

Other Reference Notes

	No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.
	Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.
-	No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.
+	And also on an earlier date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
AM	Data based on observational day ending before noon.
B	Adjusted to a full month.
D	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
SS	This entry in time of observation column in Station Index means observation made near sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.

Subscription Price 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation History" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data Annual, obtained as indicated above, price 15 cents.

USCOMM-WB-Asheville -- 8-12-58 -- 1650

CORRECTIONS

July 1957: Livingston, Climatological Data Table, total precipitation should be 1.50.

Livingston, Daily Precipitation Table, precipitation on 27th should be .10 and total 1.50.

December 1957: Delayed Data for August 1957, Livingston, Climatological Data Table, total precipitation should be 11.15, greatest day 9.80 on the 10th, and days with 1.00 or more precipitation 1.

Delayed Data for August 1957, Livingston, Daily Precipitation Table, precipitation on the 10th should be 9.80, 30th 0.26, 31st 0.02, and total 11.15.

Mansfield Dam, Climatological Data Table, degree days should be 354.

Denton, Climatological Data Table, total precipitation should be 1.37, departure -1.12, greatest day 0.81 on 25, days .10 or more 2, .50 or more 1, and 1.00 or more 0.

Denton, Daily Precipitation Table, precipitation on 25th should be 0.81 and total 1.37.
